If there is anything you want that is not shown in this
Catalogue, write us. If we do not have it, we will get
it for you.

Introduction

IT is with considerable pride that we present to the trade the first edition of our Catalogue. It is as complete in every detail as it possibly could be. It has been in course of preparation for several months, and we have brought it right up to date, with cuts of every appliance and tool for Bakers, Confectioners and Ice Cream Makers. We have carefully revised all prices, and where it was possible to make reductions we have done so. The prices will be found as low as is consistent with good, well-finished and workmanlike tools and machinery. Care must ever be exercised by a house, valuing its reputation as we do, not to put such low prices on its products that it is necessary to cut down and cheapen the quality of the same. Extremely low priced articles must, of necessity, be of inferior quality. Good goods cost money to produce and must always afford the producers certain margins of profit. Business men to whom we cater of course realize this. The prices printed, therefore, in this Catalogue will be found as low as is consistent with this principle.

We have established a reputation for fair dealing, for first-class goods, for reasonable and honest prices, and we mean to maintain the same.

We feel gratified that our constantly increasing trade is due to our efforts to provide the best class of goods at the lowest possible price.

If you want a large outfit, complete in every department, we can serve you; if you want a small outfit, or supplies in however small quantity, we will serve you with the same courtesy.

We invite careful inspection of this Catalogue, which gives indication more than anything we might here say of the magnitude of our business.

We very cordially thank the trade for their generous support in the past, and hope by continued fair dealing to be favored with their favors in the future.

Respectfully,

THE BRUCE & WEST MFG. CO.

Observations

ORDERING GOODS.

In ordering goods from this Catalogue, kindly use care in not only giving the figure of the cut, but also the number and size of the article desired where the article happens to be made in more than one size.

C. O. D. SHIPMENTS.

We do not like to make C. O. D. shipments, unless remittance of five dollars is sent with order to guarantee good faith and payment of freight charges both ways.

NEW CUSTOMERS.

Where customers are unknown to us, they should always send cash with their orders or else furnish trade reference. This sometimes causes delay until the references are investigated.

MISTAKES.

While we use great care in filling orders, we are liable to make mistakes. Customers must not in such case lose patience with us, but give us the opportunity of correcting same.

RETURNED GOODS.

We would respectfully ask customers, when goods are found unsatisfactory, to first ask us for advice regarding disposition of same, as it often happens that we can sell the goods to other customers in the same city or town and thus save expense of returning.

GLASSWARE.

Glassware is always shipped at buyer's risk.

GOODS DAMAGED IN TRANSIT.

We always ship goods in first-class order, the transportation companies will not receive them in any other manner. Therefore, if goods are damaged in transit, no claim can be made upon us. Claims should be immediately made to the transportation company, and in signing for these goods the receipt should be indorsed, "Received in bad order."

BREAD AND CAKE PANS.

In ordering pans be sure to give both top and bottom dimensions of same, also depth, and state whether the dimensions are inside or outside. When we make pans according to customer's measurements they are not returnable.

Respectfully,

THE BRUCE & WEST MFG. CO.

LIST OF SUPPLIES

FOR BAKERS, CONFECTIONERS, ICE CREAM MAKERS AND
CATERERS. QUOTATIONS CHEERFULLY GIVEN.

ACIDS.

Acetic acid, any quantity.
Citric acid, any quantity.
Tartaric acid, powdered.

ACID PHOSPHATE.

This is an article of our own manufacture.
We sell it plain or flavored. Put up in quart
or gallon bottles or jugs.

ALMOND PASTE.

We handle Heides only; as it is a Standard it
suits everyone. Put up in 5-lb. and 50-lb. cans.

AMMONIA.

Lump and powdered. Put up in 5 and 10-lb cans.

BAKING POWDER.

We are extensive manufacturers of this article. The celebrated brand, **Shull's Standard** no better powder made (a biscuit powder). Put up in 10-lb. cans, 6 cans and 10 cans to case, pails, tubs, kegs and barrels. Next comes our **Gold Medal brand**, the best on the market for the price; put up same as Standard. We also manufacture cheaper grades that we sell in bulk only.

ALUM.

Lump and powdered. Put up in any quantity to suit.

BORAX.

Borax put up in any quantity to suit purchaser.

CREAM OF TARTAR.

Cream of tartar of the highest test of purity, put up in 5-lb and 10-lb cans, pails, kegs and barrels.

EVAPORATED CREAM.

We handle the best grades, in gallon cans only.

CHOCOLATE.

We are large dealers in chocolate. We have one brand of Bitter Chocolate made to our order. It is B. & W. brand; there is nothing superior to it for a medium priced chocolate. We have the reliable brand, Runkel's Standard, known the world over. Then we have a brand we call Bakers, for medium trade at a low price. For coatings we handle all of Runkel's reliable brands.

Aurora, dark (vanilla).

Algeria, dark.

No. 3, dark.

Progress, light.

Domestic, light.

North Star, dark.

All put up 100 lbs to the case.

POWDERED CHOCOLATE.

B. & W. brand chocolate essence for high-class soda-water trade is equal, if not superior, to anything on the market. Put up in 5-lb. cans, also in bulk.

Runkle Bros. brand chocolate essence, put up in 5-lb and 25-lb cans.

Van Houten's brand chocolate essence, put up in 5-lb cans.

Our Bakers brand powdered chocolate, for medium trade. A good article for cake, icing and eclairs. Low price, put up in bulk only.

CHOCOLATE PASTE.

Our own manufacture. This paste is perfect in all that can be desired in flavor, smoothness, richness and keeping qualities for soda-water use. Put up in ½-gal. glass jars, patent fastener.

PASTE COLORS.

Non-poisonous. Our own manufacture. For confectioners and bakers. Are acknowledged unrivaled for purity, strength and beauty of color, and conform to the German Pure Food Laws of 1887. Put up in ¼, ½, 1, 5, and 10-lb. packages.

Blue, Green, Yellow, Orange, Purple, Bright Red, Ruby Red, Violet, Damask Rose, Chocolate, Carmine, No. 40 Dry.

LIQUID COLORS.

Caramel, Chocolate Brown, Green, Orange, Fruit Red, Strawberry, Brilliant Rose, Rose, Violet, Yellow, Water Egg.

EGG COLORS.

Our own manufacture, Gooldine (oil) a perfect egg yellow, put up in quart bottles, ½-gal., 1-gal., 5-gal. and 10-gal. cans.

Water color, put up in 1-gal. jugs, 5-gal. and 10-gal. cans and barrels.

Egg color (dry) soluble.

COOKING OIL.

Highest grades always on hand.

Gold Medal and Superior.

These are the two best brands on the market.

COCOA BUTTER.

Pure cocoa butter, put up to suit purchaser. English cocoa butter substitute, any quantity.

CEREALINE.

Cerealine in 80-lb. packages only.

EGG ALBUMEN.

Egg albumen in any quantity. We handle only the highest quality.

SOLUBLE EXTRACT LEMON AND SOLUBLE EXTRACT ORANGE

Are designed especially for the Soda Fountain, as they will mix clear with the syrup, and a clear glass of lemon or orange can be drawn, thereby avoiding that milky and unsightly appearance.

CAPITAL ROOT BEER EXTRACT

This is an article unsurpassed as a summer beverage, healthy and pleasant to the taste.

We put it up in a neat carton package, the bottle holding enough to make five gallons of delicious **Root Beer** easily made and but little trouble. The actual cost is not over seven cents per gallon, and possesses the healthful properties of Sarsaparilla, Wintergreen, Sassafras, Spikenard, etc., surpassing anything of the kind on the market.

CHOCOLATE PASTE

We consider, and our customers bears us out in saying, that we produce the best **Chocolate Paste** on the market. It is made from **Pure Caraccas Cocoa**, and hence has that fine and delicate flavor not obtainable from the cheap cocoa. It keeps well, and

retains this fine flavor. Ice cream makers can produce delicious **Chocolate Cream** on short notice by simply adding the Chocolate Paste to ordinary vanilla ice cream and mixing with spoon or large fork. Usually 1 to 1¼ pints Paste to 3 or 3½ gallons ice cream.

It also produces an excellent **Syrup of Chocolate** for Soda Fountains by adding five pints of plain syrup to one pint Paste and mix by shaking. No heat is necessary, it mixes readily. One teaspoonful of Paste, a little sugar and cream, all placed in a cup, and the cup filled with hot water, yields an excellent cup of chocolate, quickly made and always ready.

Confectioners find it very valuable. Give it a trial.

LEMONELLA.

Per gallon.....\$7 00

This article is unsurpassed for Bakers' use. It gives the fine aroma of fresh Lemon, and does not turn to a turpentine odor, like oil lemon. Will remain good almost indefinitely if kept corked and cool.

It has about **thirteen times** the strength of good extract of lemon, and has no spirits in it. Its use is contra-indicated for household purposes, as it is too strong, but for bakers it is par excellence, producing the fine aroma of the fresh lemon, and retaining it during the baking process. A trial is sufficient guarantee for its after use.

RUSSIAN EGG PRESERVER

A great boon to Grocerymen, Bakers and private families.

There is no preserver extant that will so completely preserve Eggs, as **West's Russian Egg Preserver**. All we ask is a fair trial of our goods, they prove their own merit, and this preserver will do just what we say. Eggs must be fresh when put down, as the preserver **will not make a good egg out of a bad one**, but will absolutely preserve a good one from becoming bad.

All this being true, is it not to the advantage of Grocerymen, Bakers, Confectioners, and private families, and in fact all egg dealers, to use **Russian Egg Preserver**? Is it not money in your pocket? Dealers putting down eggs in the summer, can realize in the winter **two dollars** for every **one** they invest during the summer. Send for circulars regarding its use.

1 gallon.....	\$ 1 75
3 "	5 00

BAKERS' DEPARTMENT

THE BRUCE & WEST MANUFACTURING CO.

J. M. SHULL, Manager

CLEVELAND, OHIO

MR. CONFECTIONER: Don't think because this is the Bakers' Department that there is nothing in it for you. Look through it and see. There are many tools and machines in it that you can use.

INDEX IN BACK OF BOOK.

BAKE OVENS

McDowell's Portable Oven

IS THE BEST.

It bakes like a brick oven. Will burn any kind of fuel, and when you move you can take your oven with you.

Fig. 1.

SIZE NO. 4.

OUTSIDE MEASURES.

Length, Inches.	Width, Inches.	Height, Inches.	
84	70	58	
Price No. 4.	-	-	\$225.00

INSIDE MEASURES.

Height, Inches.	Width, Inches.	Length, Inches.	Weight, Lbs.
14	64	78	2200
With Tile Bottom,	-	-	\$240.00

Being a continuous baker, the capacity of this size is equal to a brick oven 10 x 12 feet. Bakes evenly, producing a rich lively color and tender crust.

The above prices are net, except when cash accompanies the order we will discount 5 per cent.

 We make all kinds of Pans for use with this oven.

Fig. 2.

SIZE NO. 3.

OUTSIDE MEASURES.

Length, Inches.	Width, Inches.	Height, Inches.
68	58	58

Price No. 3, - - - \$175.00

INSIDE MEASURES.

Height, Inches.	Width, Inches.	Length, Inches.	Weight, Lbs.
14	48	60	1700

With Tile Bottom, - - - \$185.00

The above cut shows our No. 3 Oven, every inch of space inside the Oven being used; and it being a continuous baker, it will do the work of a brick oven 8 x 9 feet inside measure; thus one can make a very great saving of expense and also of floor space. With very little additional expense, we make all of our ovens with tile bottom so that they can be used to bake on the hearth, such as Rye Bread, French Rolls, etc., etc.

HOTELS AND RESTAURANTS.

The McDowell Ovens are far superior to a brick oven for hotel and restaurant work, as they take up less than one-half the space to do the same amount of work. They can be set up and run in any part of the house. They consume less fuel. They cost much less. They are easily run, any one can use them.

Pyrometers.

Fig. 3.

PRICE, - - - \$15.00

We can supply any of our ovens with one of our best made Pyrometers, registering up to 800 degrees of heat.

By the use of this instrument a great saving in time and fuel is effected, and the chance of burning light cakes, etc., by a miscalculation of heat in the oven is obviated.

Every oven should be supplied with one of these Pyrometers. Your goods are always baked the same. You avoid the dark color one day and the light color the next. Your goods are always uniform. Can be put in any oven with very little work.

 We can furnish new bricks, tiles, grates, etc., on short notice.

Our No. 2 Oven is very desirable for small bakeries, hotels and restaurants; it has 12 square feet of baking surface and being a continuous baker will do a large amount of work.

Fig. 6.

Brown Bread Steamer

The McDowell Brown Bread Steamer is an article needed very much by the Bakers of New England. Steamed Brown Bread sells much better than baked, and as there are many bakers who want brown bread in the middle of the week and Saturday afternoons, whose ovens are either too hot or not large enough, this is just what they need, as they are set on any kind of a round candy stove and when not in use can be put up out of the way. Call and see them. In writing for steamers, give measure of pots used, height with cover on, width across pot longest way, and how many pots the Steamer must hold. We can make them to cook from 25 to 300 loaves. We keep on hand Steamers from 25 to 100 loaf capacity. For larger sizes write for prices.

CLEVELAND

The B. & W. Co.'s Improved Oven

Fig. 7.

It has patent turn doors, which roll up and back out of the way. A much better idea than the drop or swing doors. Each baking compartment is separate, so that the oven is not cooled as with the old style large swing doors. The operator can get as close to the oven as desired, and can shift pans from one rack to another with ease and without burning the hands or wrists.

 If you use B. B. B. B. Flour, we have it.

Iron Ovens do not absorb Moisture and as a Consequence your Bread is not Dried out in Baking.

Fig. 292.

STEEL FRONT.

The above cut represents a Steel Front No. 6, 1903 Model, Black Diamond Oven (200 1-lb. loaf capacity.)

We say this cut represents a No. 6, but at the same time it represents a No. 4 or No. 5, as the fronts of these three sizes are exactly alike, the difference in the sizes of the ovens depending altogether in the depth.

The fronts being made of steel, we are able to get all the strength necessary, and can use a much thinner material and make up the difference in packing, and while the cast iron fronts are also packed, still the heavier metal radiates more heat than the lighter steel.

In placing this oven on the market we have not altogether discarded the cast iron front, and the oven can be had either way, and fitted with either balance doors, or cast iron swing doors as desired.

 You can use regular size pans in this oven.

Prices on Black Diamond Ovens

SIZE NO. 4, PRICE \$231.25.

For small Bakeries, Hotels, etc.

Has 35 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or about 12 square feet on each shelf. The measurement of each shelf is 42 inches wide by 40 inches deep.

CAPACITY.

This oven will hold 110 one-pound loaves in single pans, or figuring one batch of bread an hour, would turn out, say 1,000 loaves in ten hours. The cake or roll pan capacity is twelve 18 x 18-inch pans, or six 18 x 36-inch pans at a time.

FLOOR SPACE.

5 feet wide, 3 feet 10 inches deep, and 6 feet 4 inches high. Floor weight about 3,000 lbs.

SHIPPING WEIGHT.

Oven (including front).....	1,825
Tile and iron castings.....	1,855

Total weight.....	3,680
-------------------	-------

SIZE NO. 5, PRICE \$262.50.

This is the most popular size we make and is capable of turning out a large quantity of goods. It is well adapted for the baker who does his own work, and whose trade is from the store. It will do the work for a large hotel or public institution.

Has 47 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or about 16 square feet on each shelf. The measurement of each shelf is 42 inches wide by 53 inches deep.

CAPACITY.

This oven will hold 160 one-pound loaves in single pans, or figuring on about one batch an hour, would turn out say, 1,500 loaves in ten hours. The cake or roll pan capacity is twelve 18 x 25-inch pans at a time.

FLOOR SPACE.

5 feet wide, 5 feet deep, and 6 feet 4 inches high. Floor weight about 3,600 pounds.

SHIPPING WEIGHT.

Oven (including front).....	2,070
Tile and iron castings.....	2,180

Total weight.....	4,250
-------------------	-------

SIZE NO. 6, PRICE \$300.00.

This size comes next to No. 5 in popularity, and is adapted for the same users, only where the store trade is rather larger.

Has 58 square feet of hand-made tile baking surface, or about 19 square feet on each shelf. The measurement of each shelf is 42 inches wide by 66 inches deep.

CAPACITY.

This oven will hold 210 one-pound loaves in single pans, or figuring on about one batch an hour, would turn out from 1,800 to 2,000 loaves in ten hours. The cake or roll pan capacity is eighteen 18 x 22-inch or twelve 18 x 25-inch.

FLOOR SPACE.

5 feet wide, 6 feet 2 inches deep, and 6 feet 4 inches high. Floor weight about 4,000 lbs.

SHIPPING WEIGHT.

Oven (including front).....	2,530
Tile and iron castings.....	2,340

Total weight.....	4,870
-------------------	-------

Notice the small floor space this oven takes.

SIZE NO. 7, PRICE \$362.50.

Although we think this one of the best sizes we make, it is not so popular on account of the price being so little less than a No. 8. It is, however, very light on fuel, and always ready for work.

Has 79 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or about 27 square feet on each shelf. The measurement of each shelf is 56 inches wide by 66 inches deep.

CAPACITY.

This oven will hold 260 one-pound loaves in single pans, or figuring one batch of bread an hour, would turn out about 2,400 loaves in ten hours. The cake or roll pan capacity is eighteen 18 x 25-inch pans at a time.

FLOOR SPACE.

6 feet 2 inches wide, 6 feet 2 inches deep, and 6 feet 4 inches high. Floor weight about 5,200 pounds.

SHIPPING WEIGHT.

Oven (including front).....	2,750
Tile and iron castings.....	3,465
Total weight.....	6,215

SIZE NO. 8, PRICE \$400.00.

The capacity of this Oven is surprising, and would hardly be credited by any person who has not used one. It is adapted for fairly large baking concerns, large institutions, and for cake work in large wholesale bakeries.

Has 92 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or 31 square feet on each shelf. The measurements of each shelf is 56 inches wide by 79 inches deep.

CAPACITY.

This oven will hold 310 one-pound loaves in single pans, or figuring on a batch an hour, it would turn out about 3,000 loaves in ten hours. The cake or roll pan capacity is twenty-seven 18 x 25-inch pans at a time.

FLOOR SPACE.

6 feet 2 inches wide, 7 feet 4 inches deep, and 6 feet 4 inches high. Floor weight about 5,900 pounds.

SHIPPING WEIGHT.

Oven (including front).....	3,300
Tile and iron castings.....	3,400
Total weight.....	6,700

SIZE NO. 9, PRICE \$490.00.

This is considerably the largest single portable oven made in the United States, and is perhaps the largest in the world. The body of the oven instead of being made in six sections, as all our other ovens are, is made in ten sections, that is the top, sides and base are each made in two pieces, thus making it as easy to handle as a very much smaller oven.

Has 105 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick. The measurement of each shelf is 56 inches wide and 93 inches deep.

CAPACITY.

This oven will hold 360 one-pound loaves in single pans, or figuring on one run or batch an hour, would turn out about 3,500 loaves in ten hours. The cake or roll pan capacity is twenty-seven 18 x 30-inch pans at a time.

FLOOR SPACE.

6 feet 2 inches wide, 8 feet 5 inches deep, and 6 feet 4 inches high. Floor weight about 6,700 pounds.

SHIPPING WEIGHT.

Oven (including front).....	3,600
Tile and iron castings.....	3,875
Total weight.....	7,475

Black Diamond Ovens are all right.

Fig. 294.

Cut of No. 6 Black Diamond, with combination boiler attached to left side.

HOT WATER BOILERS can be attached to either side of any size of Black Diamond or Two Deck Ovens. The fire that heats the oven heats the water, which can be conveyed from the boiler to any part of the bakery.

PRICES FOR HOT WATER BOILERS, 28 GAL., \$25.00; 36 GAL., \$27.50.

COMBINATION BOILERS that can be used for hot water or for generating steam can also be attached. These boilers are fitted so that steam can be turned into the oven, or can be carried to a proving closet. By opening the supply pipe to the boiler they can be used as an ordinary hot water boiler, but they cannot be used for steam and hot water at the same time, except that hot water can be drawn from the tap at bottom of boiler while it is being used for steam.

Steam or combination boilers are tested to 200 pounds, and are provided with a steam gauge, water gauge and pop valve.

PRICES FOR COMBINATION BOILERS, 28 GAL., \$40.00; 36 GAL., \$43.50.

All above boilers are fitted to the oven here and shipped with all pipe cut and labeled so that they can easily be attached to the oven—just as it appears in above cut.

WHEN ORDERING BOILERS please state on which side of oven you wish it placed, right or left as you face the oven.

The Idea that Rye or Vienna Bread Could only be Baked in a Brick Oven has been Exploded with the Advent of the Black Diamond and Diamond Double Deck Ovens.

Fig. 293.

NO. 60 DIAMOND DOUBLE DECK OVEN.

When we put the Diamond Double Deck Oven on the market a year or so ago, we felt that it would prove satisfactory in every way, but it is necessary to have an oven tested under varying conditions before we put our endorsement on it, and for that reason we simply said what we thought it would do. Since that time we have sold a number of them and to bakers who were very doubtful regarding a portable oven of any kind, but in every case the result has been a good recommendation for the oven, and we can now speak with confidence regarding them.

The accompanying cuts are made from actual photographs, and the cuts of a No. 80 Diamond Double Deck, will convey a perfect idea of the front and back appearance of the oven when the furnaces are placed in the rear. These ovens bake evenly with the furnaces at either end, but with them in the rear you have your bakery clean and clear of ashes, and there is practically no heat from the front. It is easily practical to place the front of the oven in one room while the firing is done in another.

A space of three feet is sufficient in which to work the furnaces.

Bakers who are using these ovens tell us that three runs of bread can be baked from one fire in the furnaces, and that it is only necessary to open the draft damper and allow the fires to draw up a short time in order to get the heat in the oven again. You can bake in these ovens while the fires are being drawn up.

Write for some of the letters we have received from users of our ovens and you will be convinced that we do not claim too much for them. When the ovens are attached to a proper chimney, they always prove a wonder.

You can bake while you are firing.

SIZE NO. 60, PRICE \$300.00.

This size will about compare with a No. 5 in the Black Diamond, and will no doubt be the most popular, as it is adapted to the same class of users.

Has 45 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or $22\frac{1}{2}$ square feet on each deck. The measurement of each deck is 49 inches wide and 66 inches deep.

CAPACITY.

This oven will hold 154 one-pound loaves in single pans, or twelve 18 x 24-inch cake or roll pans. The bread capacity would be about 1,500 loaves in ten hours.

FLOOR SPACE.

5 feet 7 inches wide, 6 feet 2 inches deep, and 5 feet 10 inches high. Floor weight about 4,000 pounds.

SHIPPING WEIGHT.

Oven	2,600
Tile and iron castings.....	2,475

SIZE NO. 80, PRICE \$400.00.

This oven is fitted with two furnaces similar to the No. 8 Black Diamond. They can be placed at either the front or back of the Oven. Oven doors are placed in the center of the front.

Intended for the use of large retail baking concerns, or large institutions.

Has 69 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or $34\frac{1}{2}$ square feet on each deck. The measurement of each deck is 63 inches wide and 79 inches deep.

CAPACITY.

240 one-pound loaves in single pans, or eighteen 18 x 25-inch cake or roll pans. The bread capacity would be about 2,200 loaves in ten hours.

FLOOR SPACE.

6 feet 9 inches wide, 7 feet 5 inches deep, and 5 feet 10 inches high. Floor weight about 5,400 pounds.

SHIPPING WEIGHT.

Oven	4,085
Tile and iron castings.....	3,300
Total weight.....	7,385

SIZE NO. 90, PRICE \$490.00.

This Oven will be fitted in exactly the same way as No. 80, and is intended for the use of the same class of users, but is admirably adapted for hand-made cake work in large wholesale bakeries. The body of the Oven is made in ten sections, that is the top, base and each of the sides are made in two pieces, thus making it as easy to handle as a much smaller oven.

Has 80 square feet of hand-made tile baking surface, $1\frac{3}{4}$ inches thick, or 40 square feet on each deck. The measurement of each deck is 63 inches wide, and 93 inches deep.

CAPACITY.

280 one-pound loaves in single pans, or twenty-two 18 x 25-inch cake or roll pans. The bread capacity would be about 2,600 loaves in ten hours.

FLOOR SPACE.

6 feet 9 inches wide, 8 feet 6 inches deep, and 5 feet 10 inches high. Floor weight about 6,000 pounds.

Economy to buy either our No. 6 C or the Little Schemer for weighing small ingredients.

PORTABLE PLATFORM SCALES.

Fig. 78.

The Drop Lever relieves the bearings from the wear and strain in the act of loading and unloading. This scale is especially adapted for heavy and constant weighing. The entire load rests on the Frame and avoids the danger of breaking the sensitive parts of the Scale. Double Beams are not recommended for Drop Lever Scales.

Brass Beam and Sliding Poise.

No.	Capacity, Lbs.	Platform.	With Wheels.

Fig. 289.

See Change Sheet.

Machine No. 4 in position to remove tank.

HUNTER'S IMPROVED PNEUMATIC SPONGE-BEATER.

Intended for large batches of eggs and sugar. Operated on the pneumatic principle, which surpasses anything in its line ever before invented.

By means of an air tube through the agitator stem, at every up stroke the air is admitted to the bottom of the cylinder under the eggs and sugar, and at the down stroke a valve is closed, which forces the air out through the eggs and sugar, thus making the batch light and puffy, and most perfectly beaten.

Constructed with strong single and double tanks mounted on legs at a convenient height. Between the tanks there is water space, for using warm water in winter, and cold water in summer, for tempering the eggs, which is very important for rapid and perfect work. For making sponge, beat eggs one minute, then add sugar. These machines all have lids, and the large size braces to hold secure to floor.

Prices.

No. 2—Single enameled iron tank, capacity 2 to 3 dozen in 5 minutes.....	\$15 00

 We carry a full line of Pie Fillings.

EXCELSIOR EGG-BEATER.

(For Power.)

A very effective Machine for Beating Eggs, Sponge Cake Mixtures, Icings, Marshmallows, etc.

Fig. 291.

See Change Sheet.

This is a most desirable style of beater for beating up cake sponges quickly for small batches of icing, and for eggs. The tank is quickly raised or lowered. Cone pulleys allow three speeds of beaters, so that machine is well adapted for a variety of work. Can is made with or without tempering jacket, and tank and beaters galvanized.

When for one class of work only, machine is made with the pulleys on shaft above.

Prices.

Cone Pulleys for any size, \$10.00 extra.

 Iciline takes the place of whites of egg.

THE MORTON

PATENT

Egg Beater or Whisking Machine.

Inside View.

Shown with Beater half Drawn.

Fig. 282. See Catalogue for details.

There are nearly 2,500 of the Morton Egg Beaters in use in this country and an enormous number in Europe, especially in England, Scotland, Ireland and Australia, and nothing but praises are heard of their efficiency. Not one in use that could be done away with. This beater is a machine that will soon pay for itself, as the baker gets an excess out of each batch over what could possibly be produced by hand beating. The Morton will also produce lighter goods.

In operation these machines obtain the most perfect principle for any kind of whisking, having a lifting action, and allowing the ingredients to flow regularly while being beaten up.

The beaters which cross-cut the mixture do not have the effect of retarding it, as in some machines, but allow it to flow in a volume. By the best sponge cake makers this is considered an important advantage.

For mixing and beating eggs, and sponge cake mixtures, rice and sponge biscuits, meringues, and other egg and sugar mixtures, mixing icing sugar, etc., these are the strongest, most rapid, efficient, and easily-worked machines.

There is a hot-water chamber underneath for the heating of ingredients whenever desired; also, by the double bottom, giving additional strength.

We also rig the Morton beaters especially for cream whipping purposes, without additional cost.

THE MORTON PATENT EGG BEATER, OR WHISKING MACHINE.

With Tilting Gear.

These machines are for the same uses as the hand machines to fix upon table, but are suspended in cast iron frames, and are fitted with tilting gear, by means of which they can be discharged of their contents without dismounting or stopping the motion. This is convenient for large manufacturers, as the work can go on continuously.

	Eggs with Ingredients.	Price for Hand.	Price for Power.
No. 7	50 to 150	\$45 00	\$55 00

No. 7, with Arm Beater, as shown in cut below, \$12.00 extra.

Those for hand are made with fly-wheel, as the Butter Batter Machine below.

Fig. 283. See Change Sheet.

THE MORTON ARM BEATER CAKE MAKING MACHINE.

With Tilting Gear.

Many points of likeness to hand beating were required to make a perfect machine for Butter Batters. One of the most important of these was to obtain the peculiar rubbing-up motion given by the hand and arm. This has been more than realized in these machines. The forms of the Beaters, and the manner in which they work, the outer end of each always entering the mixture first, and rubbing upwards from the bowl or pan-shaped bottom of the machine, gives this operation of rubbing-up and constantly lifting the mixture in greater perfection than is possible by hand. The difficulties attending hand mixing are at the same time avoided, particularly the irregularity, want of sufficient working, and the difficulty of the warmth of the hand, etc. There is a hot-water chamber between the double bottoms, so that whenever it is necessary to have any warmth it can be applied with perfect regularity to all the mixture, but at other times the undue heat of the hand is entirely avoided.

There is an increased lightness and excellence in quality, as well as a very slightly larger yield in quantity of cake with the same ingredients with these machines.

	For lbs. Butter with Sugar and Eggs.	Price for Hand.	Price for Power.
No. 7	9 to 18 lbs.	\$45 00	\$55 00

Fig. 284. See Change Sheet.

Labelle Egg and Sponge Beater.

Fig. 286.

FOR HAND POWER, \$25.00.

Will Beat Up 78 Eggs at a Time.

We claim for these machines what no other machine was ever known to do, viz.:

It will beat up Egg-White.

Another important feature: The machine is supported on a substantial three-legged base; consequently it is not required that it be placed on a perfectly level or smooth space, as is the case with all other machines, nor does it need to be clamped down. It will stand anywhere and stay where you put it, no matter how rapidly or violently it is operated.

Fig. 287.

FOR POWER ONLY, \$40.00.

The power machine is equipped with tight and loose pulleys and belt shifter, which can be put on either side by simply changing one bolt. This machine will beat up to 130 eggs at a time.

Fig. 288. See Change Sheet.

DOUBLE EGG-BEATING MACHINE,

PERFECTO NO. 2.

This machine has two beaters; can be used with one beater if preferred. It does good work. It is provided with a double jacket kettle for tempering batches. Can use hot or cold water.

CYCLONE EGG-BEATER.

Fig. 281.

This is one of the most rapid, convenient and durable Beaters made for small batches. The tank is made of cast iron, and has a capacity of ten quarts. The tank is made with porcelain lining, galvanized or plain iron. The porcelain lining we particularly recommend, it being much easier to keep clean. Clamps are provided with machine to hold bowl securely to table. Agitator is quickly removed for emptying and cleaning.

Perfection Egg Saver.

Fig. 312.

BAKESHOP ALWAYS CLEAN.

Once used, no baker would do without this useful, practical Perfection Egg Saver.

This illustration shows the whole apparatus put together.

A sharp-edged bar is fitted tightly between two cans over which the eggs are broken.

One can may be used for whites, the other for yolks, or both may be used for whole eggs.

Any of the egg leaking out while breaking them will run into either of the cans.

The whole apparatus measures 32 inches in height, and can be set along side any bench or table.

The shells of the eggs will break easily and evenly over this sharp-edged bar.

Price only \$12.00.

Send in your order at once and save enough money on your egg bills in a short time to pay for it. Besides it insures cleanliness.

Fig. 313.

SAVING IN EGGS.

Every progressive baker will at once recognize the merits of the Perfection Egg Saver.

The two cans are made of strong material, and being square and wide on top, are easy to keep clean.

Each can is marked plainly into half-pints, pints and quarts.

Each can holds nearly 3 quarts.

A cover for each can is furnished to keep flies away. This cover, being shallow, can be used to break the eggs into, so as to prevent bad ones from getting into can.

No more old-fashioned pint and quart measures are needed when the Perfection Egg Saver is used in the shop.

No more egg running all over the bench while breaking and separating them.

 Did you ever try Milk Powder? Ask our salesman about it.

Fig. 314.

No more egg-shells flying all over the bake-shop floor.

BUILT SUBSTANTIALLY.

The egg shells are dropped into the large, strong can, which is 20 inches high and 12 inches square. When full of shells it can be easily emptied.

However, the shells can be crushed, and the can need only be emptied once a day.

The bottom is made very strong and is perforated like a strainer.

This can, or box, holding the egg-shells, fits firmly over another square can, which is 4 inches deep. Whatever egg is left in the shells will drip through the perforated bottom into the can below, which rests on four strong legs.

IMPROVED ORNAMENTING SYRINGE.

Fig. 222.

This illustration shows the simplicity of our new Ornamenting Syringe. The reasons why it should be in every bakery, hotel and confectionery:

1. No soiling of hands in filling or changing tubes.
2. No loss of time in taking out the plunger.
3. Our Syringe is filled from the bottom.
4. It works clean, is very light and easy to handle.
5. All parts are interchangeable and can be duplicated.
6. It outlasts thousands of rubber bags and bulbs.
7. It is electro-plated, japanned and tinned.
8. It is an ornament as well as an article of necessity.
9. It is very easy to clean, no taking apart.

10. The extremely moderate price places it within the reach of all.

BAKERS' SIFTER.

Fig. 55.

This Sifter is intended to supply a demand among retail bakers for a cheap Sifter. It is not as strong and durable as our Sizes Nos. 1, 2 and 3, but it is the best for the price in the market. The sifting is done by means of brushes revolving over a concave sieve. It is made mounted on barrel cover, as illustrated, or with slides for bakers' trough, same as our No. 200, shown below. Size of sifting cylinder, 13 inches long, $7\frac{1}{2}$ inches in diameter. Weight, 20 pounds.

Made of Poplar Wood	\$6 00 net
" " Ash	8 00 net

BAKERS' SIFTER.

Fig. 56.

This Sifter is the same as our No. 100, except longer, and larger capacity. Not so strong and durable as our No. 1, 2 and 3 Sifters, but a good Sifter for the money. This size is only arranged for a bakers' trough, being too long for top of barrel. Weight of Poplar Sifter, 33 lbs. Size, 26 inches long. Hopper holds about 50 lbs.

Made of Poplar Wood	\$ 9 00 net

No. B. Each, \$50.00.

18 inch block; cuts from 80 to 100 lbs. an hour; weight, packed for shipment, 275 lbs.

This machine is similar in all respects to the No. 5, shown in the cut, with the exception that it has but one crank.

No. 5. Each, \$60.00.

20 inch block, cuts from 100 to 125 lbs. an hour; weight, packed for shipment, 300 lbs.

This machine has two cranks and can be easily operated by two boys, or by putting a pulley in place of the large crank, it can be run by power.

Fig. 357.

WHITE MOUNTAIN APPLE PARER.

Pares perfectly, cores and slices the front and pushes off the apple and core separately. Simple, durable and cheap.

Price, 50 cents.

Fig. 358.

THE '98 TURN-TABLE APPLE PARER,

With Push-Off.

The latest and we believe the best Apple Parer on the market.

As the cut shows it is inverted so that parings fall clear of working parts. It pares unusually close at both ends of the apple. The knife as it passes the end of the fork recedes, leaving abundant room for the hand when placing the apple on the fork. The Push-Off is entirely automatic, simple but positive. It works like a charm.

Price, 60 cents.

BAY STATE**Apple Paring, Coring and Slicing Machine.**

Fig. 359.

This machine is so strongly and thoroughly made that it is much cheaper than any lower priced machine. Parings fall clear of the machine. If desired it can be used to pare only, without coring and slicing. Can also be used for paring pears.

Price, \$1.75.

 We can show you Apple Parers galore.

THE NEW LIGHTNING APPLE PARER.

Fig. 363.

The fastest hand paring machine in the world. One forward movement of the handle pares an apple from stem to blossom, while a return of the handle pushes the apple off the fork.

Price, 75c each.

THE VICTOR VEGETABLE PARER.

Fig. 364.

Especially adapted for use in institutions where large quantities of vegetables are required daily. Pares potatoes, turnips, carrots, parsnips, cucumbers, apples, pears, quinces, etc. Size, shape or roughness make no differences with this parer. It does the work no matter what the conditions, and does it well. A well made, substantial machine.

Price, \$6.00 each.

THE WHITE MOUNTAIN POTATO PARER,

Fig. 365.

Not only pares any shape or kind of potato better than can be done by hand, but enters into and cleans out the eyes, and, by taking a thinner paring, saves at least 50 per cent of the outside of the potato which is ordinarily wasted. It is free from the objections to all styles of geared parers, and so cheap as to be within the means of everybody. This machine will pare quinces and pears.

Price, 75 cents each.

There are apple parers on the following page.

Fig. 360.

THE IMPROVED BAY STATE PARING, CORING AND SLICING MACHINE.

Similar to Fig. 359 Bay State but larger and stronger in every way. It has a steel feed screw, and fastens to the table at both ends. Parings fall clear of the working parts. Has automatic push-off for removing the cores.

Price, \$3.50.

Fig. 361.

"BONANZA" APPLE PARER AND CORER.

The best machine made. Has pared more than 100 bushels in ten hours. Any ordinary girl will pare and core six bushels an hour with it by hand, and it is one of the most durable, easy running and perfect working machines ever made. Can be used to pare only or to pare and core.

Price, only \$7.50.

Fig. 362.

THE EUREKA POWER PARER, CORER AND SLICER.

This is the only successful power apple parer. It can be used by hand if desired. All parts are adjustable and easily duplicated. The workmanship is the best that modern machinery and up-to-date mechanics can produce. The three forks pass successively to the knives where the apple is pared, pared and cored, or pared, cored and sliced, as the case may be, then, passing from the knives, the apple and core are removed automatically. The operator has nothing to do but place the apple on the fork as it comes into position. Apples, cores, and parings can be separated as they come from the parers. 100 bushels of apples have been pared on this machine in 10 hours, and on ordinary apples, with ordinary help, an average of 60 to 75 bushels a day can be depended upon.

Price, \$20.00.

Packed one in a box. Weight, 62 lbs.

QUAKER CITY GRINDING MILL.

For Hand and Power with Double-Reduction Grinding Cones.

Grinds Dry Substances Only.

Fig. 335.
For Grinding Popped Corn.
Price, \$18.00.

The best machine for this purpose on the market. Fine machine for bread and cracker crumbs.

This hand mill has our Saw Crusher, double-reduction dress on face of Grinding Cones, ball box bearing end of Spindle. It has a pulley fly-wheel with handle.

THE UNIVERSAL FOOD CHOPPER.

No. 3, for Hotels, Restaurants, etc.

Fig. 337.

No. 3.....Price, \$2.50

Has four separate cutters:

1. For very fine chopping.

For Power.

This machine will grind 50 lbs. peanut butter per hour with two-horse power; 100 lbs. per hour with four-horse power.

Pulleys, 16x6. Speed, 300 revolution; Weight, 600 lbs.

Price, \$60.00.

NO. F 4 MILL.

Fig. 330.

Will grind 5 lbs. peanut butter per hour. This machine can also be used to take the shells off peanuts.

Price, \$4.00.

Fig. 331.

SCIENTIFIC GRINDING MILLS.

Fig. 343.

See Change Sheet

The construction and principle of this mill is most desirable for the grinding of stale bread, crackers, etc. It has a large hopper with breakers so that it will take in the large loaves and break them up before it passes to the grinding plates.

Mill has a large capacity on these materials, and is also a suitable mill for grinding ear corn, spices, drugs, etc. The mills all have patent double breakers with partition hopper, pin breaker and safety bottom, reversible grinding plates and other special features. The H. No. 1 has shear cut plates instead of reversible.

THE LEE NO. 40.

For Largest Users.

The No. 40 Lee Bread Crumber is for use in the largest institutions, such as bakeries, crumb factories, etc., where large quantities of bread are to be crumbed and where a strong, heavy machine of large capacity is required.

In general design and construction it is exactly similar to

No. 30, except that no hand crank is furnished and the driving pulley instead of being upon the main shaft, communicates power thereto by gearing, thus increasing the power of the crumbing fingers, which never becomes stalled under the heaviest work.

Owing to the height of the machine, to facilitate examination of the interior a glass panel is placed in each side of crumbing chamber, thus enabling the operator to make sure the work is going on properly at all times.

In the illustration above we show the end opposite the driving pulley, to illustrate the method employed to drive the series of cutters in the upper chamber above the crumbing fingers, the gearing being properly proportioned to keep the crumbing fingers fully employed.

This machine is five feet high, and occupies floor space 57x23 inches. Tight and loose pulleys are 16x5, using 4 in. belt, and should run 200 to 225 revolutions per minute. Weight, 800 lbs. Hopper, 23x24 at top. Capacity, six to ten barrels per hour. Machine is strong and steady, and under most severe duty runs without shock or jar.

Machine is shipped completely assembled, mounted upon skids ready for work. Two sizes of screen are furnished with each machine.

Each, \$200.00.

Fig. 334.

THE LEE NO. 30.

For Large Houses.

Fig. 333.

The No. 30 Lee Bread Crumber is designed and specially adapted for the use of hotels, restaurants, lunch rooms, ocean steamers, and other situations where large numbers of persons are fed daily, where light power is available and where the service requires a machine possessing simplicity, strength, efficiency and durability. It differs in design from the No. 20 in the following points: The main driving shaft projects through and has mounted upon its end a pinion; into this pinion meshes the large gear wheel partly visible on the right. This gear wheel drives two shafts situated in the chamber above the crumbing fingers and rollers, these shafts being provided with a set of tearing or dividing blades which serve to separate the bread and pass it down into the crumbing rollers. On the driving side the main shaft is fitted with fast and loose pulleys, and the end is squared and fitted with crank for operation by hand. Pulleys are 10x2½ and should make 125 revolutions per minute. Crank is detachable and should always be removed when operating by power. A large hopper 12x16 at top is attached to machine; two sizes of sieve are furnished, gearing is strong and designed for heavy and constant work. Machine has a capacity of 40 loaves per hour by hand, and capacity when operated by power is from two to three times greater. Machine, countershaft, gears and supports are handsomely finished in bronze and aluminum. Weight, 120 lbs.; height, 25 in.; floor space, 12x26.

By reference to illustration of No. 40, on same page, the arrangement of gearing driving the dividers will be apparent. Many of this size machine are now in use, built from our new designs, and we have yet to hear a single complaint that they do not come up to and even pass our representations. Wherever installed, parties are sincere and enthusiastic in its praise, the general verdict being that it is the best investment ever made.

Each, \$60.00.

UNIVERSAL CUTTING AND GRATING MACHINE.

This little machine is of great value to bakers, confectioners, restaurants, etc., etc., as it comprises in a compact form, an efficient cutter and slicer for fruit, vegetables, almonds, etc., and also by the change of discs, giving a most perfect mincer and grinder for a large variety of articles. It is furnished with four different discs, which can be instantly changed for either slicing or grinding.

Price, complete, \$16.00.

CHAMPION BREAD BOXES IN ALL SIZES.

BEST—STRONGEST.

For Use by Grocers, Butchers, Bakers, Laundries,
Department Stores, Factories, Wholesale
and Retail Stores of all Kinds.

For handling and delivering goods of all kinds. It is made very light, yet it is a very strong and substantial box. For wagon deliveries it is the best box made—better than baskets—all kinds of goods can be packed better and more of them in a square box, without danger of being crushed or injured. They save and economize space. Can be made to special sizes to suit goods or space to be occupied.

RETURNABLE SHIPPING BOX.

This box is made with a practical Hinged Cover, about two-thirds of which opens up, the balance is fastened stationary. By making a cover in this way it affords a rest for the hinged part when opened, without straining the hinges. This is an apparent defect in all other hinged covers—they open up too far and break off. We use strong wrought steel hinges and hasp, and swivel staple to fasten down cover.

NO. 250—"BUSY SALESMAN."

With Eight-Inch O. G. Base.

Dimensions: Same as above case.

"Busy Salesman" Show Cases.

GRADE A.

Made with best polished plate glass throughout, top glass beveled $\frac{1}{2}$ inch, three plate glass shelves 10, 12 and 14 inches wide on antique copper adjustable shelf brackets, doors paneled and lined with best German plate mirrors. Cases not exceeding 12 feet in length have but one light in top and front.

GRADE B.

Bevel plate glass in top, double strength clear sheet glass in front and ends. Three wood shelves on adjustable shelf brackets; doors same as in grade A, but are lined with American shock mirrors. Case not exceeding 12 feet in length can be made with one light in top. All cases above 6 feet in length have two lights in front.

GRADE C.

With bevel plate glass top, double strength clear sheet glass in front and ends, three wood shelves on adjustable shelf brackets; doors glazed with double thick clear glass. Cases not exceeding 12 feet in length can be made with one plate in top. All cases 6 feet and over have two lights in front; 6 foot can be made with one light in front.

GRADE D.

With double strength clear sheet glass throughout, three wood shelves on adjustable shelf brackets; doors glazed with double thick glass.

BASE

Is 8 inches high, of hard wood, to match frame; receding to give foot room or is made plain of Tennessee marble.

FRAME

Is made of hard wood, generally oak, best finish, smooth rubbed and hand polished. The frames in the different grades are the same, the difference being in the glass, mirrors and marble base. These cases can be fitted up with one shelf, full width of case.

DOORS

Are full height of case, unless otherwise ordered. When one shelf is used full width of case we would advise two sets of doors.

All glass in our cases not inlaid flush with moulding is bedded in putty and fastened with moulding, making cases dust proof and substantial.

NOTICE.

No countermand will be accepted after order is put in work.

 Order to-day. You lose money every day you wait.

Fig. 295.

STYLE O.

PATENT KNOCK-DOWN "VENEER-ETTE" BREAD CASE.

This is the same size and style as our Style "J" case, 24 inches square and 32 inches high. In place of hinged door we make this case with double sliding doors. Each door has a wire screened panel on top ensuring necessary ventilation.

Two slat shelves and glass sides.

This case can be made with board shelves and used for any kind of merchandise.

Price, each, \$6.00.

Fig. 296.

PATENT KNOCK-DOWN BREAD CASE.

Glass sides, 2 shelves and double sliding doors made with wire screen ventilators.

Made in 3 sizes, either in "Veneerette" finish or in "Oak."

Adapted especially for dealers that handle a large quantity of bread.

The 100 and 102 are double the size of Style "J" or "K."

These cases can be used for any purpose and made with board shelves and without the wire screen.

Made in "Veneerette Finish."

Our Combination Gas and Gasoline Engine.

FRONT VIEW.

There is nothing on the other side; you see all the working parts.

Fig. 25.

See Change Sheet.

The above cut represents our 5 H. P. This size we recommend for running our 4, 5 and 6 bbl. mixers.

GASOLINE.

The Howe engines are so constructed that they can use gas or gasoline or both at the same time. This is an advantage when running on natural gas when the supply is low. The change from one fuel to the other can be made instantly, and while the engine is running at full speed.

The gasoline is stored in an iron tank outside of building and underneath the ground. There is positively no danger whatever, there being no outlet to the air. Less than two ounces of gasoline is in the building, and that is confined in iron pipes.

Our method of handling gasoline has been endorsed by all insurance companies. This engine will pull a 5 H. P. load 10 hours a day for 25 cents per day.

WRITE US FOR PRICES ON ENGINES.

We guarantee the Howe Engine.

Our Handy Andy Engine.

FOR GASOLINE OR GAS.

See Change Sheet.

 The Handy Andy is a dandy.

Our Improved Gas or Gasoline Engines

5 HORSE POWER

These Engines are the simplest and best constructed Engines of the kind made.

Very economical in fuel, this 5 H. P. is just the Engine for running large Dough Mixers, large Ice Cream plants, Etc.

We guarantee our 5 H. P. to be an actual 5 H. P.

WRITE FOR PRICE

2½ HORSE POWER

This 2½ H. P. is exactly like our 5 H. P. in construction. This Engine is just right for running Ice Cream Freezers, Ice Crushers, Fans and 1, 2 and 3 bbl. Dough Mixers.

Guaranteed an actual 2½ H. P.

BAKERS' AND CONFECTIONERS' SUPPLIES

CLEVELAND

CLIMAX VERTICAL AUTOMATIC ENGINE

COMBINED VERTICAL OUTFITS.

Combined with
VERTICAL BOILER ON SAME BASE.

Fig. 422.

See Change Sheet.

Here we show a Climax engine and boiler on the same base. These rigs are all set up and connected, then taken apart and packed for shipment. This makes it very portable, and easily placed in position, where it would otherwise be difficult to get equal power of other designs.

There is a drip around the base which provides for all waste oil, etc., making it possible to keep the place around the engine and boiler neat. Prices include injector and all necessary fixtures, fittings, etc., except stack.

Above prices are F. O. B. factory.

We can furnish you any H. P. Boiler separate for generating steam for any purpose. We can furnish you any H. P. Engine sparate, either upright or horizontal. The above Engines and Boilers are unsurpassed for efficiency and fuel economy; they are fully guaranteed in every detail. Write us for prices on Boilers or Engines sparate. Every Engine thoroughly tested before shipping.

 Above Boilers are sold separate from Engine if desired.

OUR "SUPERIOR" DOUGH MIXER IS THE BEST.

Fig. 23.

The Lightest Running Dough Mixer Made.

Built from the floor. Does not have to be blocked up. Stands solid and firm. All gears are guarded. Belt shifter and dumping wheel operated from the front. Cast iron step attached to frame to stand on while scraping down the sides. Does away with the nuisance of having a step or box in your way all the time. Has the latest patent brass stuffing boxes, brass oil cups, etc. Our Mixer is complete in every detail.

OUR PONY MIXER.

(Cans Interchangeable.)

For creaming eggs and sugar this machine cannot be equalled. Recommended by all bakers who have tried it.

Fig. 417.

This machine is made with a wide heavy cast iron base to bolt to floor or bench, and a strong upright shaft on which mixing blades are raised and lowered. There is a special device for locking the arm holding the blades when let down into can, giving perfect rigidity to machine. Blades and can are revolved in opposite directions, causing a quick and thorough mixing of materials. Cans are made of heavy galvanized sheet iron, with handles for convenience in handling.

A desirable machine on account of its thorough and rapid mixing principle, and the great convenience in removing cans for emptying and cleaning.

This machine is just the same as above, except for hand power.

 A fine Machine for small bakeries.

HAND DOUGH BRAKE,

With Adjustable Steel Rolls and Large Fly Wheel.

Fig. 419.

Price, \$25.00.

DOUGH BRAKE OR BISCUIT MACHINE.

Fig. 420.

A cheap and effectual machine. The rollers and feed table are of well-seasoned wood, other parts of iron; is fastened to dough trough or to a table. Space occupied about 2 feet square. Size of rollers, 20 inches long, $4\frac{1}{2}$ inches diameter.

Price, each, \$18.00.

WATER TEMPERING AND MEASURING TANK.

Fig. 421.

This device will be found a great convenience and saver of labor in every bakery using mixers. It should be attached to the wall or post near the mixers, or can be suspended from ceiling. A cold water and a hot water (or steam) pipe enters the tank from below, and the water in tank can be tempered to suit. A water glass gauge shows the amount of water in the tank or amount emptied out, and a thermometer connecting with inside of tank shows the temperature of water. A wire protected hose enables the operator to discharge the desired amount of water into one or more mixers. The tank is made of steel and heavily galvanized. An overflow pipe attached to tank near top, and connecting with waste pipe or sewer, prevents an overflow from doing any damage. Pipes are so arranged inside that the hot or cold water or steam is evenly distributed from top to bottom, so that the temperature is uniform throughout tank.

NO. 221. STEEL BREAD RACK.

Fig. 188. See Change Sheet.

Our Steel Bread Racks are built to meet the requirements of the baker as to size and construction. The framework is made of heavy angle steel, thoroughly braced and riveted together.

Angle steel corners and bottom plates strengthens and braces the entire Rack.

Mounted on heavy 4-inch wheel ball bearing casters makes it an easy truck to operate.

The Rack is $5\frac{1}{2}$ feet long, 28 inches wide, 66 inches high and has 9 wood slat shelves, 28 inches wide and 6 inches clear.

Each shelf is made in 2 sections which can be taken out and cleaned. A shelf made in this way is far superior to a loose slat shelf in which the slats warp and break, causing endless trouble, loss of time and material.

Every practical baker will appreciate this as well as the width, 28 inches wide.

Price, each, \$22.50.

BAKING PAN TRUCK.

Fig. 191.

Size 30 inches long, $29\frac{1}{2}$ wide, stakes 21 inches high, width between stakes 25 inches. Made of heavy oak thoroughly bolted together.

Heavy 4-inch wheels in center and 4-inch ball bearing casters on each end.

Price, each, \$10.00.

NO. 200. WOOD BREAD RACK.

Fig. 189. See Change Sheet.

This is a very substantial Bread Rack. The frame is made of hard wood, and the slats in shelves of whitewood. $5\frac{1}{2}$ feet long, 30 inches wide, 61 inches high, 8 shelves 6 inches clear. 3-inch wheel, ball bearing casters make it easy to operate.

COMPARE OUR SIZES,

They have double the capacity of others.

SHOP TRUCK.

Fig. 190.

42 inches long, 24 inches wide, 48 inches high, loose stakes.

Made of strong oak, all parts bolted together, 4-inch swivel ball bearing casters.

Price, each, \$8.50.

Fig. 185.

NO. 180. WALL PAN RACK.

Made of hardwood and iron.
 Size 55 inches high, 22 inches wide. Has 18 iron shelves, 18 inches long.
 Made to swing and close up when not in use, but it is arranged so when open it is rigid and stationary.

Price, each, \$6.00.

No Better or Cheaper Rack Made.

Fig. 186.

PROVING CLOSET.

With or Without Casters.

These proving closets are made very strong and in a substantial way of white wood. Can be warmed with oil or gas stove or steam. Slats are 3 inches apart in the clear and are removable.

Same as No. 218, with casters.
 Price, \$20.00.

Fig. 187. See Change Sheet.

CHALLENGE PAN RACK.

Bottom frame of cast iron, and uprights of oak or ash. Both this and the Boston Rack are to be used with advantage in the loading and emptying ovens, loading from one side and placing pans with baked goods on the other side. Pans are kept off the floor, and much room and trouble saved by using these racks. Twenty pans on each side.

Weight, 185 pounds. Floor space, 30x36. Height, 6 feet.

Price, \$16.00.

 A Pan Rack is a great labor saver.

BERTRAM DOUGH DIVIDING MACHINES.

Fig. 413.

This cut shows the 30 part portable machine for rolls or biscuits. The capacity of the pan is 9 lbs. dough or less. The machine requires very little space; it can be placed on the trough, bench, table, or wherever desired. The divided dough can be delivered to any place in the bake shop without loss of material. Space required, 18x22 inches. Shipping weight, 300 lbs.

Price, \$115.00.

Fig. 414.

This cut shows another style of the 30 part roll or biscuit machine called the cover machine. Capacity, 9 lbs. dough or less. This machine is self contained on the frame or legs to which the lever mechanism is applied. This machine has no pan; the cylinder, which receives the dough for pressing and dividing is contained in the top plate. The cover is readily locked with a small lever as shown. The most simple machine of this style and is preferred because no pan is needed. Floor space required is 30x30 inches. Shipping weight, 500 lbs.

Price, \$140.00.

VAN HOUTEN.

30 part divider. A very simple machine.

Price, \$125.00.

Fig. 415.

 A Dough Divider will save the price of itself in a short time.

VAN HOUTEN

36 Part Dough Divider for Rolls, Buns, Cottage or
Biscuit Bread, and Raised Doughnuts.

Price, \$150.00.

DOES IT PAY TO USE A
DOUGH DIVIDER?
EMPHATICALLY, YES!

The machine enables you to make your rolls, etc., of an exact size; you can put a certain number of ounces into each dozen rolls and you know exactly how much material you are giving per dozen, and therefore you know the cost. The machine enables you to make your rolls any fraction of an ounce in weight with precision and with great rapidity. If you are making 100 dozen rolls per day and by the use of the machine you save as little as one ounce of dough per dozen, it amounts to 100 ounces or $6\frac{1}{4}$ pounds, which is equal, at $1\frac{1}{2}$ pounds per dozen, to about 4 dozen rolls, a saving of from 32 cents to 48 cents per day, or \$90 to \$150 per year. We claim that any baker making 100 dozen rolls per day can pay for his machine the first year in its saving in material alone. This is not all! Your goods go into the market in a much more perfect condition; being even in size, they present a better appearance and give much better satisfaction to the buyer.

Fig. 416.

TABLE OF WEIGHTS.

To find the whole weight of dough required to make
rolls weighing from one pound to three
pounds per dozen.

Find in the first column the amount in pounds and ounces you wish one dozen rolls to weigh.

Opposite this, in the second column, is the whole weight required to be put in the machine at one time.

In the third column is shown the weight of each roll.

Weight of rolls per dozen.	Whole weight of dough to be put in machine.	Weight of each roll.
1 lbs. 0 oz.	3 lbs. 0 oz.	1 1-3 Oz.

BRIGHTON VEGETABLE PRESS,
For Restaurant and Hotel Use—Mashing Potatoes and Other Vegetables.

IT SAVES

TIME

IT SAVES

POTATOES

IT SAVES

MONEY

Fig. 350.

Potatoes boiled in their skins and put through this Press come out in slender shreds leaving their skins behind.

The PRESSURE PAIL is made of heavy tin plate with a tinned wire gauze bottom. It can be placed in the pot and the potatoes boiled in it; when lifted out, the water instantly drains off through the screen bottom. It is then put in the press and in two minutes the work is done.

The potatoes are not touched after being put on to boil, and being pressed in a hot pail retain their heat. This is the quick way, but some may prefer boiling the potatoes in the pot and transferring them to the PRESSURE PAIL.

For heavy work two or more PRESSURE PAILS may be used to advantage.
PRESSURE PAIL holds one peck.

Complete Machine, \$10.00 each.

Extra Pressure Pails, \$2.00 each.

HENIS' PATENT FRUIT AND VEGETABLE PRESS.

Fig. 351.

Each, \$0.50.

THE STERLING SLICER NO. 50

Fig. 352. See Change Sheet.

Meets the demand for a machine that will slice perfectly Hot and Cold Bread, Bacon, Smoked Beef, Cold Meats, Oranges for Marmalade and any food that needs to be sliced. It saves money for the user in Hotels, Restaurants, Markets, Steamships, and everywhere where slicing in quantity is done.

One important advantage in the Sterling is, that it not only claims to do these things under the most advantageous circumstances but it does them in the every-day common use of the machine.

DESCRIPTION.

The cutting is done by a round tool steel knife, 8 inches in diameter, finely ground and tempered. This revolves as the carriage moves across the face of the material to be cut, and both the movement of the carriage and the revolutions of the knife, which is attached to the carriage, is given by the rotary motion of the handle, the increased revolutions of the knife being given by an internal gear and a pinion, these both being concealed in the case. As the knife travels across a loaf of bread $5\frac{1}{2}$ inches square, the cutting edge of the knife travels 38 inches, while the frame is moving forward $5\frac{1}{2}$ inches. This is as if a knife 38 inches long was drawn full length across the material to be cut. Compare this shear with any machine you know of. After the cut is made, and while the handle is still being turned the same way, the carriage and the knife is drawn back ready for the next cut, the same motion being continued indefinitely. One revolution of the handle completes both the cutting and the return movement.

Price, each, \$15.00.

RECIPE BOOKS FOR BAKERS.

No. 99.

Printed in English and German.

30,000 Copies sold in the United States.

The above is the only reliable bakers' recipe book in existence, it has been the first one ever published in the United States, and is continually growing, it is out in its Sixth Edition.

"We guarantee every recipe in this book."

Price, \$2.50.

THE COMPLETE BREAD, CAKE AND CRACKER BAKER.

Containing all necessary information in regard to the science and art of baking. A handsome and valuable volume of 384 pages.

Price, \$3.00.

And 22 cents extra for registered postage.

Pick me up at your leisure, there may be \$\$\$\$ inside for you.

A WARNING.

Anyone intending to buy a bakers' recipe book should write to us, because all the recipe books ever published we keep in stock and are ready for shipment, but many of them sailing under a false flag, others are made up by newspaper men, hotel bakers and other men who do not know how a baker-shop looks during the night or day. Write to us and we will give you all the information free of charge; we find that this is necessary as we know that many bakers have been disappointed by buying a worthless book.

A book full of puddings and sauces will not answer for the practical baker. Enclose a two-cent stamp.

"A man forewarned is forearmed."

THE ILLUSTRATED CAKE BAKER.

By H. Hueg.

The contents of this little book is the result of 30 years' study and practical experience in this particular line. The main object is to give none but the most reliable and practical recipes, and it is especially compiled for the benefit of the journeyman cake and bread baker. It contains about 60 pages, 400 recipes, and 200 designs and illustrations.

Price, 52c.

CONFECTIONERS' DEPARTMENT

THE BRUCE & WEST MANUFACTURING CO.

J. M. SHULL, Manager

CLEVELAND, OHIO

MR. BAKER: Don't think because this is the Confectioners' Department that there is nothing in it for you. Look through it and see. There are many tools and machines in it that you can use.

INDEX IN BACK OF BOOK.

MILLS' PATENT FRUIT-DROP FRAMES.

These frames are fitted to Standard Gauges. The brass boxes and housings are milled out so as to fit accurately, and is so constructed that a pair of rollers may be taken out and replaced in one minute. Parties after purchasing a machine may at any time have rollers sent to them guaranteed to work satisfactorily.

Fig. 423.

No. 1. Frame only, without improvements, for No. 1 Rollers, $3\frac{5}{8}$ inches long.....\$7 00

Fig. 424.

This cut represents the Nos. 2, 3 and 4 latest Improved Patent Frames.

No.	Size of Rollers	Length at Base	Width	Weight	Price, Frame only
No. 2.....	$2 \times 3\frac{5}{8}$ inches.	12 inches.	$6\frac{3}{8}$ inches.	20 lbs.	\$10 00
No. 3.....	2×5 "	12 "	$7\frac{1}{2}$ "	21 "	15 00
No. 4.....	2×6 "	12 "	9 "	22 "	20 00

This Frame has Bronze Metal Boxes top and bottom, which are adjustable by means of set screws, so that the rollers can be set to run true at all times, thereby making perfect drops. It is also provided with T slots front and back, into which the heads of the bolts are fitted to secure the machine to the bench. The rollers shown are for making two patterns; they represent No. 3, Acid Drop, and No. 12, Fish. The guide plates can be set forward to the middle of the rollers, so that either pattern may be made separately.

For Good Machines come to us.

FRUIT-DROP ROLLERS FOR BOILED SUGAR.

These Rollers are made from the best Bronze Metal with Steel Shafts and Cut Gears.

Fig. 425.

POWER SIZING MACHINE AND CAMEL CUTTER.

Fig. 435.

Latest designs power Caramel Sizing and Caramel Cutting Machines.

These machines are built strong and heavy for handling large batches.

The sizing machine is modern designed, with corrugated rollers, it has a clutch for reversible motion, and is built strong to turn out a quantity of work in the least time. It weighs, 1,100 pounds.

No. 1.	Rollers, 18 inches long, $6\frac{1}{2}$ inches diameter.....	\$200 00

Fig. 436.

The Power Caramel Cutter is built of heavy maple and pine with iron braces. The tempered steel knives (7 inches in diameter) are key-seated to shaft and separated by collars of three different sizes. The machine has 24 knives. Can be built with more or less, as desired.

PRICE.

24 Knives, \$150.00. Extra Knives, \$4.00 each.

Do not forget we can Make any Kind of Machine to order.

NO. 1 PATENT NUT BREAKER.

Fig. 437.

We now have a perfect machine for breaking uniformly all kinds of nut kernels, such as Almonds, Peanuts, Filberts, Pecans, etc., used in the manufacture of Nougat, Caramels, Cut Creams, Buttercups, and all other Nut Candies.

It is also used for breaking Pop Corn fine for cakes, and Grinding Gum Arabic.

It will do more work in five minutes than can be turned out by any other machine in one hour, and with no waste. It can be adjusted to break coarse or fine.

Weight boxed, 50 lbs.

No. 1. Price, \$25.00.

PATENT COCOANUT AND FRUIT SHREDDERS.

Fig. 438.

These machines can be adjusted to shred fine or coarse, and are indispensable to Desiccated Coconut manufacturers and Fruit Canning establishments for grating Pineapple, Peaches and other fruits for the manufacture of Marmalades.

It is also used for shredding fresh bread into crumbs for restaurants, hotels and caterers.

No. 1. Hand-Power, 75 Cocoanuts per hour,
\$40.00 Net.

Arranged with fast and loose pulleys for power,
\$50.00.

CIRCULAR BATCH CUTTER.

Fig. 439.

Consists of 6-inch steel knife revolving between two handles, which admits of the full pressure being brought to bear on the cutting edge. Is a handy tool for cutting off pieces of the batch, and is especially useful in handling caramel batches.

Price, \$2.50.

 We carry a full line of Desiccated Coconut.

COCOANUT CUTTER.

Fig. 440.

This machine has two round face knives that are ground concave from the back, thus giving a keen, sharp edge, making a smooth, clean cut. There are two rows of saws or strippers in front of each knife, the first row being set to come between those of the second so that the nut is cut into strips of one-sixteenth inch square or less, according to the set of the knives, making it suitable for many purposes.

Cocoanut Cutter, Style A, \$22.00.

Length, 17 inches. Width, 11 inches. Weight, 36 lbs.

COMBINED COCOANUT CUTTER.

MINT CAKE CUTTING MACHINE.

Fig. 449.

A quick, easy-working machine.

The goods roll out on the bench.

Where the balls are to be pressed, this machine has several advantages over all others, as it does the work so quickly that the goods do not have time to chill.

Sizes in stock, $\frac{1}{2}$ inch, $\frac{5}{8}$ inch, $\frac{3}{4}$ inch and 1 inch. Any size to order.

Price, \$25.00 net.

STICK REGULATING MACHINE.

Fig. 450.

This machine should be used in connection with our Cylindrical Ball Machines and Seamless Clear Candy Drop Machines in order to insure uniformity in size of strips fed to these machines, which is an important factor.

It is made upon a strong frame which can be bolted to a bench or table and is supplied with rollers having seven sizes of grooves to give the candy the proper size. Grooves— $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch.

Price for power, \$55.00.

 We have Fine Colors for stick candies.

STICK CANDY MACHINES.

Fig. 451.

This cut represents machine and two patterns, No. 1 and No. 3, combined on the same rollers, which comes cheaper than having the two in separate frames.

In this class of machines the rollers are not changeable, on account of the guide-plates, which, if not properly set in place, would make the machine practically useless.

These designs are made for one-cent sticks. The same designs are used for five-cent sticks, but increased in proportion. Any number of designs cut on one roller.

One-cent stick, any one pattern	\$15 00
“ “ “ two patterns.....	20 00
“ “ “ three patterns	25 00

The five-cent stick machines are made with larger rollers and frame, in proportion to the work to be performed.

Five-cent stick, any one pattern	\$30 00
“ “ “ two patterns.....	40 00
“ “ Ice Cream Candy, flat pattern	30 00

We make a great variety of patterns, the above are only the most popular.

Any Design to Order.

YORK CRYSTAL ROCK CUTTER.

Fig. 453.

Patented.

This cut represents the only self-feeding Crystal Rock Cutter on the market. The machine is 36 inches long, 16 inches wide, and will cut twenty sticks at once, or

ONE HUNDREDS POUNDS IN TEN MINUTES,

with less scrap and more even than the old way. The machine is very simple, with little or no chance for wear, and can be run by a child. All you have to do is to put the candy in the bed of the machine, turn the wheel, and the machine will do the rest.

This machine is fully guaranteed, and is pronounced a great success by all who have used it. (Cuts goods while warm.)

Price of machine, \$25.00 net.

Fig. 454.

SINGLE WHEEL STEEL CUTTER.

Knife 4 in. diameter.

Price, \$1.00.

CUT-DROP MACHINES.

LATELY IMPROVED.

Fig. 459.

This cut represents our Sour or Lemon-Drop Cutter, which is used for a large variety of **Cut-Drops** in different flavored candies, such as Acid, Lemon, Mint, Horehound, and many other cough mixtures.

The lower wheel carries the steel knives, which are secured to it, and the brass ring which they support, thus allowing the small cog-wheel to be held secure in its position, in order to push the candy from between the knives, where it is pressed and cut by the pressure of the top wheel on the edge of the knives. The **Cut-Drop** and **Dice-Lump** Machines are made larger and heavier, in proportion to the work to be performed by the same.

SIZE OF DROPS AS FOLLOWS:

No. 1.	Sour or Lemon Drop,	$\frac{3}{4}$ inch long,	$\frac{3}{8}$ inch wide;	weight	15 lbs.
" 2.	Cut-Drop,	1	" " $\frac{5}{8}$	" " "	23 "
" 3.	Large Sour Drop,	1	" " $\frac{7}{16}$	" " "	25 "
" 4.	Dice-Lump,	$2\frac{1}{8}$	" " $\frac{3}{4}$	" " "	58 "
" o.	Special Size,	$\frac{3}{4}$	" " $\frac{1}{4}$	" " "	15 "

The length of the Drops can be as much less as the operator may desire to make them by spinning the candy to any suitable thickness before feeding it to the machine.

PRICES AS FOLLOWS:

No. 1.	Sour or Lemon-Drop Cutter.....	\$15 00
" 2.	Cut-Drop Machine	25 00
" 3.	Large Sour-Drop Cutter. Wheel $5\frac{1}{2}$ inches diameter	30 00
" 4.	Dice-Lump Machine	40 00

POWER ATTACHMENT FOR SMALL MACHINES.

Fig. 461.

Price of power attachment only..... \$25 00

Length, 24 inches. Width, 23 inches. Weight, 106 pounds.

Can be attached to all small machines, such as Fruit-Drop Frames, Stick Machines, Humbug Cutters, Kiss Cutters, etc.

When you want a complete outfit come to us.

PATENT BUTTERCUP CUTTERS.

Fig. 467.

No. 1. 24 inches long, 3 inches wide, cuts 35 pieces..... Price, \$6 00

This is a machine every confectioner should have for cutting Buttercups, Drops, etc. It gives them a fine cushion-shape and glossy appearance.

Fig. 468.

No. 2. 34 inches long, 4 inches wide, cuts 150 pieces.

LIFTER FOR NO. 2 CUTTER.

It has steel fingers which fit into the knives of the machine, so that the 150 pieces of candy can be removed at once. Weight, 50 lbs.

Price, complete \$15.00.

BLAIR BUTTERCUP CUTTER.

Fig. 469.

This machine is a decided improvement over all other machines on the market.

No. 1. Cuts 32 pieces, \$25.00.

No. 2. Cuts 49 pieces, \$30.00.

WAFFLE CUTTER, NO. 1

Fig. 470.

A new machine for cutting Waffles, Satinettes, etc. Cuts thirty-six pieces. Makes a beautiful flat piece of confectionery one inch wide, indented on both sides as shown in cut. This machine is a dandy for any fine retail trade, or manufacturers of nice counter goods. An endless variety of candies can be made with this machine, which will always find a steady sale.

Weight, 30 pounds.

Price \$10 00

WAFFLE CUTTER, NO. 2.

This cut represents our No. 2 Waffle Cutter. This machine is the same as our No. 1, with the exception that it cuts seventy-two pieces one-half inch wide.

Weight, 30 pounds.

Price \$10 00

Fig. 471.

"WAFFLE ON A STICK" CUTTER, NO. 3.

Here we have a great machine for cutting "Waffles on a Stick," or any other large penny piece the manufacturer may wish to make. The machine cuts nine pieces two inches wide. You will note that every piece is alike and in making "Waffles on a Stick" you will have a uniform size.

Weight, 30 pounds.

Price \$10 00

Fig. 472.

 Above are all good sellers.

PATENT "CRIMPED-EDGE" BUTTERCUP CUTTER.

Fig. 473.

This machine is 34 inches long, 4 inches wide.

OUR LATEST. This machine is undoubtedly the best ever built; it cuts a buttercup or any other counter goods a half-inch wide, and leaves a beautiful crimped edge each side of piece.

Price, with lifter, \$25.00.

"TOM THUMB" BUTTERCUP CUTTER.

Fig. 474.

This machine is 20 inches long, 4 inches wide.

ANOTHER NEW ONE. Here is a machine which makes some of the most handsome and attractive counter goods. An enormous variety of goods can be made with this machine. Every up-to-date confectioner should have a T. T. cutter.

Price, with lifter, \$10.00.

 The Crimped Edge is a beauty.

SMOOTH BASE CUTTER.

Fig. 475.

The above cut represents our new smooth Base Cutter, which cuts a piece of candy that is cushion shaped on top with a smooth bottom, and which is a great seller. It is 34 inches long and 4 inches wide, and the knives are one inch apart.

Price, \$15.00.

BLOSSOM CUTTER.

Fig. 476.

The above cut represents our new Blossom Cutter, which makes a very handsome piece of candy. It is 34 inches long and 4 inches wide. We furnish a lifter with this machine so that the 75 pieces of cut candy may be removed with one movement. No confectioner should be without this machine, as it is up-to-date.

Price, \$15.00.

Fig. 482.

GASOLINE BATCH HEATER.

This Heater supplies the wants of those who cannot obtain gas. It will consume only one gallon of gasoline per day.

It is portable and can be placed in any position.

It is clean, suitable and durable.

It gives a steady smokeless flame, and, having a copper hood, throws the heat directly upon the batch being worked.

The flame can be regulated from an intense heat to a small flame.

24 inches wide.

Price, \$24.00.

 We can please you in a Batch Warmer.

BUTTERCUP OR MIXED DROP MACHINE.

Fig. 483.

This machine is used for cutting Buttercups and a large variety of other candies. Two sizes, $\frac{5}{8}$ and $\frac{3}{4}$ inch. Weight, 14 lbs.

We also make this machine with saw teeth when ordered, without extra charge.

Price, \$18.00.

CHAMPION CANDY CRIMPER.

BAKERS' AND CONFECTIONERS' SUPPLIES
CLEVELAND

SIX BURNER GASOLINE FURNACE.

Made for Confectioners.

Fig. 506.

This furnace is provided with six burners, which can be operated in conjunction with one another or each and everyone separately, so that it may be used for a small or large batch, also for slow boiling or quick work.

It will boil a batch of 25 lbs. in 15 minutes ready to put on slab.

It will boil a batch before coal or coke fire can be started in an ordinary furnace.

It weighs 50 pounds including tank, and can be put out of the way when not in use.

The hood shown on furnace in cut is made for 16-inch kettle. Larger sizes made to order.

The flames leave the kettle perfectly clean, and do away with the dirt and dust caused by coal and ashes.

The heat is steady and uniform, which is very important in all boiling.

When finished the flames can be turned out at once, thereby relieving the workshop or store from excessive and unnecessary heat.

It is simple to operate. Tank capacity over two gallons, and will burn ten hours with all burners lit

Price, \$28.00.

CONFECTIONERS' GASOLINE FURNACE.

Is made to take the place of stationary cooking apparatus; it has no equal in the market for quick and effective work. Diameter, 14 inches.

Can be started in a few moments, and when through turned off instantly, thereby doing away with the unpleasantness of a hot stove or furnace during warm weather.

Is easily operated and can be moved from one place to another, as it weighs only twenty pounds when filled.

Tank capacity, 3 quarts. Will burn ten hours.

Price, \$15.00.

Fig. 507.

HEAVY SHEET IRON TABLE FURNACE.

PATENT BEATING OR MIXING MACHINE NO. 3.

Fig. 529.

For Marshmallow Sponge, Icing, Eggs and Pound Cake Dough.

No. 3. For power only, capacity 100 lbs. sponge..... \$100 00
Speed, 175 revolutions. Shipping weight, 375 lbs. Floor space, 43 x 24 inches.

We sell all styles and sizes of Thos. Mills & Bro.'s Beating Machines.

MILLS' PATENT COCOANUT GRATER.

Fig. 595.

After experimenting for over fifteen years, we are now prepared to offer the only perfect mill for granulating soft substances, such as **Cocoanut**, **Pineapple**, **Peach Almonds**, etc., also for **Cracker Dust** and **Gum Arabic**. It is self-feeding, self-cleaning, and is so arranged that it can be taken apart simply by undoing one screw. We guarantee this machine to be perfect in all its parts. It will thoroughly granulate every particle of cocoanut placed in the hopper.

Every pair of boxes is packed in the wrapper.					Weight Boxed	Width of Feed Roller	Price

Fig. 596.

SELF-CLEANING COCOANUT GRATER.

This machine grates the nut in shreds, suitable for cakes, pies and different lines of confectionery. It consist of a heavy tin cylinder, open at the lower end, and provided with a metal scraper, which removes the grated nut as fast as it comes through. The cover can be removed by undoing the two thumb-screws, and the cylinder taken out and cleaned.

Price, \$15.00.

Height, 18 inches; width, 12 inches; weight, 35 lbs.

Fig. 586.

POP-CORN BALL PRESS.

Foot Power.

This cut represents a press for making balls $3\frac{1}{2}$ inches in diameter. It has brass cups top and bottom, and so arranged that the ball is pushed out of the cup at each operation.

Table measures 24 x 18 inches. Sizes of balls, $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3, $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$ and 4.

Any size ball or brick to order.

Price complete, \$35.00.

(Any one size ball.)

POP-CORN BRICK MACHINE.

Price, \$40.00.

POP-CORN BALL HAND PRESS.

CHOCOLATE WAFER DROPPER.

Fig. 593.

Size, 10 x 14.

Price, \$15.00.

ALMOND SLICER.

Fig. 594.

Adjustable for thick and thin slices.

Price, each, \$2.75.

 We carry strictly Pure Cream Tartar.

METALLIC BON-BON MOULDS.

Fig. 578.

Adapted for making a fine line of Cream Bon-Bons, having the appearance of Dipped Bon-Bons, decorated with nut meat or French fruit. A new line of candies, bright and clean. No starch required. Saves time and labor. Full set contains 100 bars, running from five to seven impressions to the bar, making over six hundred impressions at one casting.

Price, \$35.00.

Half set contains 54 bars, making over three hundred impressions at one casting.

Price, \$20.00.

We furnish a recipe for Cream (Fondant) with each order, which does not require crystallizing, and will keep nice and fresh for several weeks. Has a high gloss, and is actually worth to anyone all that is asked for the moulds.

RUBBER CANDY MOULDS.

Fig. 579.

Latest Designs: Bon-Bons, Wafers and Chocolate Drops.

They are made very light; all the surplus rubber is cut away, making the mould weigh from 2 to 2¼ lbs. each. Will cast about 2½ lbs. of sugar.

Price, per pound, \$1.25.

IMPROVED DROPPER.

For Cream Work.

Fig. 580.

This dropper is arranged with rubber stoppers which are operated by handle shown on top. It can be easily taken apart and cleaned.

Price, \$6.50.

 Use Rubber Candy Moulds and do away with Starch.

Fig. 584.

CHOCOLATE COOLER.

Patented March 14, 1893.

No. 72.

The above cut represents a case of drawers designed for use in factories. The idea of this Cooler is this: When goods are being put in the cooler, instead of opening a refrigerator door, a drawer is pulled out which is air tight in the back; hence no cold air escapes. Each drawer holds two trays 12×12 inches, and the cooler will take care of the work of 10 to 12 girls. The best results are obtained if one girl is trained to attend to the cooling process. She knows where every tray is and how long it has been cooling. Each tray needs only 10 minutes in the cooler. We furnish 80 trays with No. 72. In a slack time when only part of force are working, by closing the opening at the top and bottom of center flue, half of Cooler can be used without any waste of ice. This is an item worth remembering. Dimensions, $7 \times 3\frac{1}{2} \times 7$ feet.

Price, \$135.00 net.

Fig. 585.

CHOCOLATE COOLER.

Patented March 14, 1893.

No. 72½.

This Cooler is like the preceding one, is designated for factories that are limited for room but wish to employ 15 or 18 girls. This size will take care of that amount of work and do it right. The same principle applies as in the other, of closing up the flues and using part of Cooler if desired. This size has 60 drawers and 120 trays. Dimensions, $7 \times 3 \times 10$ feet.

Price, \$175.00 net.

THE "YANKEE" POP CORN CRISP MACHINE.

This machine is the most modern and latest improved machine of this kind on the market. It makes 24 Fritters each pressing, and will press 35,000 to 40,000 Crisps per day.

Four feet long, 30 inches in width; weighs about 200 lbs.

Price, \$60.00.

EUREKA POP CORN CRISP MACHINE.

Fig. 651.

This is the simplest and best machine for the price on the market for Pop Corn Crisps. It makes 20 Fritters each pressing. Four feet long, 28 inches wide.

Price, \$40.00.

 We have some good Pop Corn Fritter Receipts that go with Machines.

FORMULA FOR MAKING THE FRITTERS FURNISHED IF
DESIRED. POWER REQUIRED 1-6 HORSE POWER.

POWER FRITTER OR CRISP MACHINE.

Fig. 652.

WEIGHT 400 LBS. FLOOR SPACE 5x6 FEET. SIZE OF FRIT-
TERS $3 \times \frac{7}{8}$. SIZE OF LARGE DISC OF WHEEL 30 IN.

This is the only Fritter Machine on the market that runs by power; it can be run by hand if desired; it is very attractive while in operation and is just the machine for parks or summer resorts. The batch is mixed in the jacket mixing can, then the holes in the large revolving disc wheel are filled with the mixture and are pressed by the pressing wheel into shape and ejected onto the canvas belt by the ejector and carried down the table on said canvas belt to be packed. The capacity is from two to three thousand fritters per hour as this depends entirely on skill of operator. If so desired we furnish a 110 volt electric motor with shafting, belting, pulleys and everything so that all you have to do is attach the wires to machine and it will run at the proper speed. Write for prices and particulars.

THE POP CORN CRISP MACHINE OF TODAY.

We have used and experimented with many principles for making pop corn crisps and know that our latest improved design embodies all that is required of a practical machine for the purpose, judging from our extensive experience and that of the users of such machines.

Our
Latest
Machine
No. 5.
5½ ft. long,
30 in. wide.
30 in. high.

Fig. 653.

Consisting of Machine
and Press Table com-
bined, Jacketed Mixing
Tank, 3 Moulds, Ejector,
Gas or Gasoline Heater
for Tank, 2 Paddles, 2
Wrapping Forms. Stand
Attachment for holding
Pan.

In the No. 5 machine we have all the improvements and good ideas that have developed in the manufacture and use of the preceding machines. We now consider this machine complete. All castings have been reconstructed and made larger and stronger. The legs have been braced with heavy crosses, making the whole machine solid and substantial throughout. This is necessary on account of the rough usage most of these machines receive. Many machines are in use daily from early in the morning until late at night. The workmen naturally become tired and careless, and do not give much care to the use of the machine. Our machines are made to stand all rough usage, as a break or interruption during a rush would mean the loss of many dollars.

The table is of white ash, filled, rubbed and varnished, and has a finish like fine furniture. All exposed metal parts are finely nicked. A railing is built around the top so that loose grains do not fall over on the floor, thus preventing the unsightliness of the corn under the workmen's feet. The loose grains are either brushed back in the mixing tank, or are pushed forward into the offset that holds the ejector.

No practical machine of this kind can be made that will take up less space. The mixing, placing in moulds, pressing, ejecting and stacking on pans is all done on the table and in a space of 5½ ft. x 30 inches. This is a great advantage as positions of workmen do not have to be changed, saving time and labor, and increasing the output.

Each mould makes 22 pieces each pressing. Capacity of machine is about 600 pieces to the batch, or 40,000 pieces per day depending upon help operating it.

Price complete, \$150.00.

Fig. 654.

Fig. 655.

FAULTLESS FRITTER MOLD.

Twenty-five Fritters at each pressing is the record of our Faultless Fritter Mold. We guarantee all parts of this machine for a year. Two sets of molds go with each machine.

Fig. 656.

FAULTLESS FRITTER MOLD.

One quick man and two helpers can turn out 2,000 fritters, or more, an hour. The fritters can be made to any desired thickness, as the regulator is adjustable. We guarantee satisfaction every time.

Price \$50.00.

No. 657.

PEERLESS FRITTER MOULD.

The best, cheapest, most durable and simple for making pop corn fritters. The instructions for making pop corn delicacies accompany each mould.

Size 3, 3¼, 3½, 3¾ inches in diameter. Two moulds complete constitute a set.

THIS PEANUT AND POP CORN BUSINESS.**DO YOU WANT IT?**

"Say yes, and you show a healthy business spirit. Say no, and you turn down one of the best paying lines possible at your store. When money is changing hands, it is a mistake for you to have yours behind your back. Your customers, your possible customers, and your competitors' customers would buy Peanuts and Pop Corn if they could find the nice crisp kind that these Roasters produce. You will have the best looking display possible if you use one of our superior styles. People can't resist buying when they see they are properly prepared and displayed. Just settle these points:

- 1st. These machines are scientifically made to preserve the sweet flavor.
- 2d. They are the most convenient and economical.
- 3d. They are automatic. The motion don't stop when you rewind spring power. The kind our imitators make does.
- 4th. These machines have the most convenient parts to use.

The fact is we have put into use more Roasters and Poppers than all other factories put together.

Why?

Because they are the best and cheapest.

That's All!

SUCCESS IN CHUNKS.

You find it when you commence to use a Stunner. How do you figure profits? The only way is to count the cost of the raw stock, your investment and incidentals, and subtract them from your sales. If you do this in the Peanut and Pop Corn business you may be astonished and wonder why you never saw it was profitable before.

Why should you stay out of a profitable business that pays its own way? One or the other of these styles will surely pay you.

Read description:

WHAT HUNDREDS OF MERCHANTS USE.

They are well satisfied. We therefore conclude you would be if you had one. It creates business. Advertises your store, satisfies your customers, and adds to your profits. No question about profits. Is there any good business reason why you should not have one and wake up the trade at your store? Your choice will satisfy us. These styles are all good, but one may fit your place of business better than another. These all succeed. The process, the style,

the finish, the display, and the wearing qualities should be considered when you buy.

A FEW POINTS FAIRLY STATED.

There is profit in the Peanut and Pop Corn trade. A Good Roaster is needed to get it.

We guarantee the most complete and satisfactory machines on the market.

The Peanut and Pop Corn eaters are fully satisfied with stock produced on our machines.

We have everything you want and everything your customers want. Why not provide yourself with one. It will improve your business, put a good profit in your cash drawer, and stop your customers from buying elsewhere.

WHAT THE PUBLIC SAYS**AFFECTS YOU AND YOUR BUSINESS.**

Don't put the cart ahead of the horse. Don't say I have no Peanut or Pop Corn trade, therefore I need no machine. The public is saying you do not have the kind of Peanuts or Pop Corn they want. They want fresh or none. The machine goes ahead of the trade. Place yourself in position to demand the trade. Make a bid for business. The trade is waiting, the profit is there, the machine will get it, and you will succeed if you deal with us. It is no venture. Twenty years of business relations with merchants has shown us that they succeed with these roasters. We urge you to buy one of these styles.

A FEW DAYS TOO LATE.

Many merchants are always looking for a good paying scheme. They are readily convinced of the merits of our roasters, they are persuaded to buy, but they delay until the business season for doing business comes. Now is the time, just as soon as you see the proposition is right. Do not delay and then hurry your order in at the last moment, a few days too late to meet the special occasion you want to make money out of. While our stock is large, we find some difficulty in keeping pace with a rushing business.

Delays are dangerous. There is seldom any merit in delay. Draw the right conclusion and see that we get your order in at once.

THE BOSS ON WHEELS.

Fig. 659.

Description of the Boss on Wheels.

Weight, 160 pounds. Dimensions—Greatest width, 32 inches; height over dome, 39 inches; length, 38½ inches. Will go through a 28-inch door. Material—best we can buy. Body is cast and galvanized iron. Gearing, brass and steel. Warming Pan—22 inches wide, 24 inches long and 4 inches deep. Will contain 1¼ bushels of nuts. Glass cover if desired. Three dollars extra. Boiler holds eighteen quarts of water. Has a glass gauge and spigot. Whistle with safety valve—can be blown at any time. No explosion possible. Power is furnished by coiled spring. One winding usually roasts a batch. The "Boss" roasts as quickly as any kind made. No fuel is wasted.

Price, \$71.50.

Terms:—\$20.00 cash and \$10.00 per month until paid, or \$64.35 net cash.

Fig. 662. STUNNER.

THE RIPPER.

Fig. 66r.

Description of the Ripper.

Length, 36 inches. Width, extreme, 32 inches. Will pass through ordinary doors. Height over all, 56 inches, to top of dome, 41 inches. Automatic latest improved spring power turns cylinder. Roasts 12 quarts. Keeps peanuts warm by steam circulating boiler, having water gauge and steam whistle. Same heat for roasting heats water. Cylinder carried on self adjusting roller bearings. Independent burner. Upper case for hot peanuts, lower for raw to make display. Fire test paint. Handsome oak finish show case. Nickel plated parts very ornamental. Just right. A trade winner. Convenient and satisfactory.

Price, \$80.00.

Terms:—\$20.00 cash and \$10.00 per month, or \$72.00 net cash.

Fig. 663. NICKEL MINT.

Description of the Stunner.

Width, 33 inches. Height over all, 6 feet. Length, 5 feet 6 inches. Weight, 440 pounds. Pop corn case, 26x26x36. Spring turns peanut cylinder. Has hand shaker corn popper. 24-inch rubber-tired wheels, finely finished show case. Handles hot peanuts, salted peanuts, hot pop corn. Has two cool show cases for candy, gum, cracker jack, etc. Air pressure gasoline tank, torch light, etc. Everything complete. It's a great money maker.

For street business or for a roomy store this machine is a four-time winner. The price is low and terms liberal. We guarantee every feature and we now have hundreds of pleased customers using this

THE RIVAL.

Fig. 660.

Description of the Rival.

Width, 18 inches. Height, 56 inches. Occupies 27x24 inches of floor space. Mounted on 13-inch rubber tire wheels. Spring power turns the roasting cylinder. There is a door on each side of the machine. You place the cylinder in position to roast through one and operate the heating device through the other. This machine is painted in attractive colors. It has warming device and steam whistle, glass show case, nickel parts in the proper places, water gauge glass to boiler, and in fact, everything needed in a first-class machine. You simply wind it up and take out the nuts when done. Tester is provided to try the nuts as they roast. It is a pretty machine in design and large enough for retail trade. It roasts 12 quarts at a roast and does it as quickly as any machine made.

Price, \$71.50.

Terms:—\$20.00 cash, balance \$10.00 per month, or \$64.35 net cash on arrival.

style in all parts of the country. Consider all of its features and rest assured if you put one into use it will pay well. Price, \$125.00.

Terms:—\$25.00 cash; \$10.00 per month, or \$112.50 net cash.

Description of the Nickel Mint.

Weights 300 pounds; crated, 400 pounds. Height, 50 inches. Length, 53 inches. Width of case, 23 inches; of axle, 32 inches. Mounted on 20-inch rubber tire wheels. Has finely finished glass case with glass partition and a sliding door to each compartment.

Gasoline burners for fuel. Large spring motor for power. Has two cylinders, one directly above the other, one for peanuts and the other for pop corn. You shell the corn and put it in the square can and it feeds into the cylinder, and comes out popped into the glass case itself. Peanuts are dumped from the cylinder into glass case. Machine has a warming device and whistle and all of our latest improvements. It is complete in every detail. It comes to you guaranteed. Roasts about fourteen quarts of peanuts at a roast, and pops about one quart of flake pop corn per minute. Price, 104.50.

Terms:—\$25.00 and \$10.00 per month, or \$94.05 net cash on arrival.

THE COLUMBIA NO. 20.

Popper and Roaster, with Two Wheels.

Fig. 666.

DESCRIPTION OF COLUMBIA NO. 20.

Hand Power. Self-Discharging.

The Columbia Novelty Roaster and Popper is handsomely finished, makes a great display and does the best quality of work. Pops eight to ten barrels of flake corn per day, if required. Has four large gasoline burners which may be swung outside of machine to generate. You turn cylinder at one end and corn discharges into upper front drawer. Reverse motion of cylinder clears same of poor or unpopable corn. Construction is strong, everything convenient, goods well displayed, and as a money maker the Columbia is always satisfactory.

For Peanuts, it has a special drum fifteen inches in diameter by eight inches long. The rear case is for hot peanuts, the front case for pop corn. Heat from the burner keeps stock fresh and crisp. Lower front drawer is for shelled pop corn. Doors are provided at top for access to both peanut and pop corn case. We mount the Columbia on rubber-tired wheels in two styles, 13-inch front wheels, 20-inch rear wheels.

PRICES.

Columbia No. 20, Four Wheels	\$60.00
Columbia No. 20, Two Wheels	55.00

Terms:—\$20.00 cash; balance, \$10.00 per month, or 10 per cent off for cash in full.

THE PEERLESS NO. 35.

Popper and Roaster.

Fig. 667.

DESCRIPTION OF PEERLESS NO. 35.

Hand Power. Self-Discharging.

Size, set up, at extreme points: Length, 40 inches; width, 26 inches; height, 69 inches; diameter of wheels, 30½ inches; peanut show case, 13 x 12 x 18 inches; display case, 27 x 23 x 33 inches; pop corn cylinder and peanut drum, 8 x 15 inches. Weight with mountings, 240 pounds; weight of mountings, 100 pounds; weight crated, 300 pounds.

Operated by hand power.

The painting is attractive. The display case when filled with peanuts and pop corn shows up to advantage, and, altogether, the outfit is a winner.

Price of Peerless No. 35 complete, \$85.00.

Terms:—\$20.00 on arrival of machine; balance payable \$10.00 per month, or \$76.50 net cash.

 We carry in stock the best Old Rice Pop Corn Shelled.

Fig. 664.

POP CORN KING NO. 10.
For Pop Corn and Peanuts.

DESCRIPTION OF POP CORN KING NO. 10.

Pop Corn Drum.—Size, 8 inches long by 15 inches diameter. You put in a charge of shelled corn and as fast as it pops it is deposited in a pan automatically.

Burners.—Two double gasoline burners furnish heat to pop and keep stock warm.

Dimensions.—Height, 3 feet 2 inches; width, 1 foot 6 inches; depth, 1 foot 4 inches; weight, 55 pounds; crated, 90 pounds.

Display Case gives room for several sacks. Has door at top. Roasts Peanuts also.

Capacity.—8 to 10 barrels of Flake Corn per day.

Necessary Fixtures.—Scoop, corn catcher, extra pan, burner fixtures, packed with each machine.

Price, \$28.00 Cash—Includes Peanut Drum.

Fig. 665.

POP CORN KING NO. 5.
For Pop Corn and Peanuts.

DESCRIPTION OF NO. 5 ROASTER AND POPPER.

Dimensions same as No. 10 except display case on top, which we do not furnish with this style.

It has all of the essential features of any of these roasters and poppers for preparing the stock for sale. It can be set on a counter or table and is a great convenience and soon turns in profit enough to pay for itself.

Price, \$25.00—Includes Peanut Drum.

\$10,000,000.00 A YEAR

Are spent for peanuts in this country alone. We are peanut eaters from away back. Don't imagine people do not like peanuts. The appetite of the Boston bean eater shrinks into nothingness compared to the American appetite for peanuts. This vast sum of money is in circulation for peanuts. You have a chance at it if you have a peanut roaster that distinguishes you from the cheap peanut dealer that sells the stale, soggy kind so common in grocery stores. Remember you want a scientific process, something up-to-date, not the common, cheap, never-win kind, not the thing that looks like it would do, but a guaranteed trade maker that is always satisfactory.

 Above is the best factory Popper on the market.

POP CORN KING NO. 15.

For Pop Corn and Peanuts.

Fig. 668.

DESCRIPTION OF POP CORN KING NO. 15.**Dimensions.**—Same as No. 10 with same fixtures.**Mounting.**—Metal wheels, rubber tired; will carry machine any place.

Roasts Peanuts also.

Compartment.—Pop Corn catcher; space for supply of raw corn; space for bags, salt, etc.; case at top for sacked corn.**Weight.**—90 pounds; when crated, 15 pounds.**In General.**—It's a complete outfit. Has been used constantly for several years. It soon pays for itself and immediately sets you up in business. Others are making money with them, therefore it is reasonable to expect that you can.**Put one in front of your Store,**

or on a prominent corner, or follow fairs, re-unions, picnics, summer resorts. In fact, get in touch with the public and a good business will result.

The profit on pop corn is very large. One pint of shelled corn pops out sixteen pints; it weighs shelled about one pound to the pint. A pound of raw corn at 6 cents, after passing through the popper, is worth 35 to 40 cents. 100 pounds cost \$6.00; sells at say \$35.00.

Price of No. 15 complete, \$38.00.**THEY ARE MAKING MONEY.**

There is hardly a city or town in the United States where our roasters and poppers are not in use, making money for the merchants. Your location is likely as good as anybody's. Your customers are as apt to buy peanuts or pop corn as any; they have the cash and open up their pocketbooks in your store every day. Set a nice roaster full of peanuts and pop corn before them and you will see how quick they can be interested. It is your business to tempt them with something nice. The profit from this business will pay for the effort. There is more money in it than in lots of things you are wasting energy on. Try it and you will never regret it. The machine will make you money.

A PUSHHER.

A business hustler will never hesitate on our proposition. It is so easy. The machine pays for itself. To push the business, just put out a sign. The roaster is the best one you can put out; it is novel; it gives life to the appearance of things. Your customers remark about the improvement, its novelty, the fine display. They are tempted to buy because you have placed yourself in position to secure their trade. They buy to see what you have, and keep on buying because you have what they want, something fresh and crisp.

NO. 4. PEANUT OR POP CORN WARMER AND DISPLAY CASE.

Fig. 669.

DESCRIPTION OF DISPLAY CASE NO. 4.**Size.**—17 inches wide, 24 inches deep, 52 inches high. Handsomely finished; well made throughout. Air tubes so constructed as not to let glasses sweat. Has gasoline burner, water boiler and whistle.**Price, \$18.00.**

We make style No. 2 without glass in top and a little smaller at \$12.00

One of these warmers will increase trade wonderfully. You must make a nice display of good peanuts or pop corn to succeed.

The customers soon find out where they can get a good article, and the trade is yours if you have one of these warmers.

 We carry a full line of Gold and Silver Cords, also Tinsel Cords.

DIRECTIONS FOR LIGHTING AND OPERATING LEE'S IMPROVED "BOSS" ROASTER AND WARMER.

1. Fill the tank with gasoline.
2. Open valve below the tank, allowing the gasoline to flow down the feed-pipe to burners.
3. Open burner-valves, allowing drip-pans to fill with gasoline. When full, close the valves.
4. Light the gasoline in drip-pans, allowing it to almost burn away. Then open burner-valves, and regulate them so as to obtain a blue flame (more heat is obtained from the burners in this way than in any other). Should the flame in the drip-pans go out before you open the burner-valves, then take another light, and, after opening valves apply the same to the small slits in burner caps.
5. When through roasting, and the cylinder is withdrawn, the burners can be raised and fastened directly under and close to the warmer by simply unloosening the thumbscrew of the pipe-clamp in the back of the roaster. The large opening, caused by the withdrawal of the cylinder, is then closed by covering same with sheet iron pan which accompanies every gasoline roaster. In this way no heat what^{er} ever is lost.
6. See that there is sufficient water in the warmer.
7. Use the tester while the cylinder is in motion, and peanuts or coffee can be roasted perfectly.
8. To empty contents of the cylinder, draw it half-way out, open the sliding doors, and revolve the cylinder to the left. The cylinder in this way empties itself.

 The memory of quality lasts long after the price has been forgotten.

NOTE.

When ordering, state size of Roaster wanted—peck, half bushel or bushel—also whether Tin Warmer or Copper Warmer is wanted—also whether Charcoal or Gasoline Roaster is wanted.

00.

 The best Charcoal Roaster on the market.

FAULTLESS CORN POPPER.

It produces larger, sweeter and whiter corn, also a greater yield than any other machine.

The popped corn is not damaged by remaining over the fire, but is separated from the unpopped and ejected from the cylinder each revolution, the unpopped remaining over the fire.

It thoroughly screens the corn and avoids further breaking and loss by screening. Full instructions sent with each machine.

THE ADVANCE COIN-OPERATING MACHINE.

Fig. 684.

Fig. 685.

For automatically selling various kinds of shelled nuts and loose candies.

Can be operated anywhere as it is absolutely legitimate.

Made to operate with a "cent," and also with a nickel.

It is a marvel of simplicity and is very durable, being made entirely of metal and glass. The sides of the receptacle are heavy glass.

The receptacle holds eight pounds of salted shelled peanuts.

The machine is 18 inches high and 10 inches square at the base and is thoroughly enameled both outside and inside, and is well ornamented, thus making it very attractive.

The stand is made of a top and bottom casting connected by a piece of gas pipe—the whole well enameled. It is 35 inches in height and is very neat and convenient.

On the whole this machine is the best and most attractive of its kind on the market, and is a great money earner.

Try one and be convinced.

These machines can be used on the counter or the show case. Fig. 685 shows the machine on stand, which can be set anywhere in the store or outside the store door. This machine is provided with the Advance Coin Detector. It is simple, durable and reliable, and keeps out more "slugs" than any other device of the kind made, and prevents "plugging" of the machine. It saves its cost in a short time.

Price, complete, \$12.00.

The Advance Machine will operate with small candies as well as peanuts.

THE LIGHTNING BURNER.

Patent applied for.

This Urn shows our new heating device attached. It has been a long-felt want among the manufacturers of Urns to find a heating device that would give as good result as gas. The above is equal in every respect, and the cost would be about one-fourth to that of gas. Use nothing but the very best gasoline. Works the same as a gasoline stove. This device can be attached to any Urn we make.

OUR NEW 1901 ICE CREAM MACHINE.

Double Geared.

Fig. 694. See Change Sheet.

With patent Spiral Dasher and hand cut gears, the lightest running 10-gallon machine on the market. No gears down in the salted ice, consequently no gears rusting out. This machine has brass oil cups, invisible babbit boxes, good heavy steel shafts, polished. A machine that is a pleasure to work with, and comparatively the cheapest machine on the market. The tubs are made of the best cedar with $1\frac{1}{2}$ -inch staves, and heavy hoops and side handles. Floor space, 24×36 inches; pulleys, 12-inch diameter, $\frac{3}{8}$ -inch face. Height over all, 60 inches; speed of pulleys, 190 revolutions per minute. Weight of freezer complete, 625 pounds; weight of flywheel, 100 pounds. Handle furnished for hand use.

The most economical Freezer made.

Price with Copper can	\$115 00

FOR DRUGGISTS, HOTELS AND RETAIL CONFECTIONERS.

The demand for a smaller machine than our 40-Quart Freezer, from Druggists, Hotels and Retail Confectioners, has led us to produce a 25-Quart machine for Power and Hand use. The construction is of the same style and quality as our large machine and it is a durable and serviceable freezer. It has the same device for releasing tub and can as the larger machine. The can is made of 22 gauge material and is driven by a spur on inside of the rim and has malleable bottom. The dasher is of the spiral type, is made of malleable iron and has two side scrapers. Can and dasher are heavily tinned. The tub is made of the best cedar with staves 1-inch thick, has heavy hoops and side handles.

Dimensions of Power Machine—Floor space, 21 x 36 inches; height, 40½ inches; size pulleys, 12 x 3 inches; speed, 150 revolutions per minute; weight complete, 300 pounds.

Dimensions of Hand Machine—Floor space, 21 x 36 inches; height, 40½ inches; size flywheel, 24 inches; weight flywheel, 75 pounds; weight complete, 285 pounds.

 Buy a Machine from Bruce & West and you get the best.

OUR B. & W. IMPROVED 40-QUART MACHINE.

Fig. 695. See Change Sheet.

This Freezer will meet the requirements of those who desire a good machine at a lower cost than our New 1901. It has given satisfaction wherever introduced and will bear favorable comparison with any machine of this style on the market. The price is as low as is consistent with good material and workmanship. The column is made in one piece and is firmly bolted to base plate. The can, dasher and tub are of the same general construction as our New 1901. The gear on can top is adjustable for wear by means of a set screw. The upper gear is held in position by a feather key and is easily removed. A handle is furnished with each machine.

Dimensions—Floor space, 24 x 36 inches; height, 60 inches; diameter of pulleys, 18 x 4 inches; speed, 100 revolutions per minute; diameter of flywheel, 44 inches; weight of flywheel, 160 pounds; weight of Freezer, 625 pounds.

Price, Copper Can, \$75.00.

Price, Steel Can, \$70.00.

 With an extra Tub and Can you have practically two Machines.

These machine have been added to our line to meet the demand for a machine lower in price than the New 1901 or the B. & W. improved. They are well constructed in every detail and only the best material is used. The frame is extra heavy and the bearings are babitted. Copper or steel can with band around top and lug carrier. The dasher is of malleable iron, heavily tinned and has a steel shaft; side and bottom scrapers are malleable iron, heavily tinned. Tubs of the best seasoned cedar, with brass center and galvanized hoops.

Dimensions—Flywheel, 46 inches diameter; weight, 226 pounds; pulleys, 18 x 4 inches tight and loose: crank with Hand and Power Machine; total weight, 635 pounds—40-Quart Hand and Power Machine.

Hand machine same as above without pulleys. Weight, 574 pounds. 30-Quart Hand and Power Machine same as 40-Quart, except flywheel, 44 inches diameter; weight, 167 pounds; pulleys, 16x4 inches tight and loose; total weight, 545 pounds. Hand Machine same as above without pulleys, total weight 490 pounds.

NO. 1 CHAMPION ICE CRUSHER.

For Power Only.

Weight,
1100 pounds.

Capacity
10 tons
Per Hour.

Fig. 707. **See Change Sheet.**

Economy.—The Champion Ice Breaker will cut the ice quickly to the size best suited for the purpose, thus saving time and making the ice last longer than when cut by hand.

Dimensions.—Floor space, 3 x 4 feet; height, 3 feet; width between frames, 28½ inches; pulleys, 18 inches diameter, 3 inch face.

Reliability of the Champion.—There is not a machine built as heavy, with as few parts or as easy running. The rust caused by the salt and water, and the hard, rough usage to which appliances for this purpose are subjected, make the above features absolutely necessary in a satisfactory machine.

The plates are set into one another, so that by moving center one in or out the ice is broken any desired size. No removing of plates is necessary as in breakers of other makes. The ice can be taken out from the front, back or side, as guides are cast on the frame into which iron plates slide, and which are easily changed so as to deliver the ice in the most convenient place. This has proved to be very advantageous.

The weakest parts of other breakers are the top and front incline plate, ours never break. The cylinder is very heavy with long hub fitted on steel shaft with keys; flywheel is also fitted with keys. No cheap work done by using set screws for this purpose.

The handle can be screwed in rim of flywheel when breaker is to be used for hand power. When so used and front inclined plate should be dropped and fastened in the last hole, so as to feed ice slower and thus require less exertion to turn.

Self-tightening interchangeable teeth, no rivets or set screws to get loose.

Price, \$112.00.

 Buy a Champion, it beats them all.

NO. 2 CHAMPION ICE CRUSHER.

For Hand and Power.

Weight,
750 pounds.

Capacity
5 tons
Per Hour.

Fig. 708.

Efficiency.—The Champion Ice Breaker will cut the largest quantity of ice with the least expenditure of power, owing to the shape and position of the teeth.

Durability.—The Champion Ice Breaker is built to cut ice every day in the year, twenty-four hours a day and to do it without repairs, because every part is proportioned to stand any strain that can be put upon it while doing the work for which it is intended.

SELF-TIGHTENING INTERCHANGEABLE TEETH.

Dimensions.—Floor space, 3 x 2 feet; height, 2 feet 9 inches; width between frames, 14½ inches; pulleys, 14 inches diameter, 3 inch face, size of cake (any length), 14½ x 14½ inches.

Price Hand Power, \$60.00; Hand and Power, \$70.00.

Extra teeth, 50c each.

The Champion will do in a few minutes what it takes a man hours to do.

NO. 4 CHAMPION ICE CRUSHER.

For Hand and Power.

Weight,
about
350 pounds.

Capacity
2 to 3 tons
Per Hour.

Fig. 709.

Floor space, 16 x 20. Pulleys, 9 x 3.

Price, \$40.00.

RAPID ICE BREAKER NO. 5.

Opening for Ice, 14 x 15 inches.

Fig. 710.

The Rapid Ice Breaker is an efficient, durable and substantially built machine for breaking ice in small pieces, for use in freezing ice cream for confectioners, bakers, hotels, restaurants, and for packing fish, oysters, milk, etc., or where broken ice is required in quantities.

The cylinder of machine is composed of sections keyed to driving shaft, each section having two teeth. The teeth are made of best cast steel, with points forged, tempered and ground. They are attached to cylinder sections by bronze bolts and malleable iron clamps, so that parts cannot rust together, and admit of being replaced when desired.

Weight, 540 pounds: size of pulleys, 14 x 3½: should run 80 revolutions per minute: capacity, 5 tons per hour.

Price, \$65.00.

 By using an Ice Breaker, you save your Packing Cans as the ice is uniform.

RAPID ICE BREAKER NO. 7.

Fig. 711.

Opening for Ice, 14 x 21 inches.

Each machine has two combs through which teeth pass, one for coarse and one for fine broken ice. Beside the variation in size obtained in this manner, there is also an adjustment on the machine to use with either comb, so that any desired size of broken ice can be readily obtained.

The breaker is arranged for hand and power. The tight and loose pulleys are 14 inches by $3\frac{1}{2}$ inches, and should run about 80 revolutions per minute; the faster machine is run the finer the ice will be broken. The Nos. 5 and 7 machines are alike, except one is 15 inches and the other 21 inches wide in opening for ice.

Weight, 640 pounds; capacity, 7 tons per hour.

Price, \$75.00.

An Ice Breaker will save the price of itself in a short time.

Price, \$30.00.

IMPROVED "POLAR" ICE SHAVER.

Fig. 824. *See Change Sheet.*

Made of same material as Fig. 823. Ice falls direct into the glass. Price, \$30.00.

QUICK AND EASY ICE SHAVER No. 105.

Fig. 825.

1903 DESIGN.

The construction is entirely different from the machines formerly sold by us. It has a screw feed, making the cutting positive and easy. It has a releasing nut that allows the feed screw and follower to be instantly adjusted for refilling. It is constructed so that it shaves small as well as large pieces of ice, that will enter the cylinder which is $7 \times 7\frac{1}{2}$ inches.

The knives are adjustable to shave fine or coarse, as desirable, depositing the shaved ice directly into the glass.

The tray has spout to attach hose to drain off the water.

All parts coming in contact with the ice are heavily galvanized, and the outside finished in Aluminum Bronze, which makes it rust-proof.

It is the most perfect and complete Shaver yet produced, and overcomes the many difficulties heretofore found in other Shavers on the market. It is especially adapted for preparing fine ice for soda fountains and other purposes for which shaved ice is required.

Aluminum Bronze Finish...\$18 00
Brass, Nickel-Plated 28 00

WOOD LEMON SQUEEZER No. 47.

Fig. 868.

Made of hard maple, nickel hinge, has Lignum-vitae Bowl.

Price, 85c.

No. 42. WALKER'S QUICK AND EASY LEMON SQUEEZER.

1901 Design. Has no Equal.

Fig. 829.

It has been very much improved by using a glass juice receiver which sets in bottom of outside iron cup. The crusher head and the perforated spiral ribbed crusher cup, holding lemon, are made from cast aluminum. The aluminum cup and glass juice receiver set in loosely, and can instantly be removed for cleaning. The juice of the lemon does not come in contact with the iron metal which insures absolute purity and cleanliness.

The Squeezer combines a squeezing, rotating movement which is adjusted so that it extracts every particle of juice, making it the most economical Squeezer made, and Quick and Easy to operate.

Price each, \$4.00.

Price extra cups, \$1.00.

THE ICE CREAM CABINETS AS HERE REPRESENTED ARE MADE IN THREE SIZES.

No. 1.	For one 5-gallon packing can, price.....	\$10 00
No. 2.	For two 5-gallon packing cans, price	17 00
No. 3.	For three 5-gallon packing cans, price.....	25 00

See Change Sheet.

The cabinets are made inside and out of heavy steel, the inside galvanized, and the outside has a dark enamel finish. Between the inner and outside wall is Mineral Wool, solidly packed, and next to the outside is a dead air space which entirely prevents any "sweating" of the Cabinet, and protects the ice from rapid melting. A brass tube passes through the walls to the inside of each compartment, by means of which the water from the melted ice may be drawn off at will. Each packing can space is provided with two covers. The outer lid covers the ice space and the other lid covers the ice cream can. Only one lid need be lifted to get at the Packing Can, the other lid prevents the warm air from coming in contact with the ice. The entire wood top is of solid oak, with a dark finish. The packing can casing which separates the ice from the packing can is easily removed whenever the inside of the Cabinet needs washing out. The Cabinet is mounted on casters so that it may be easily moved when desired. If you wish to always have nice hard frozen cream procure one of these Cabinets.

See cuts of Cabinets on opposite page.

ICE CREAM CABINETS.

Fig. 847.

All Cabinets having more than three jars come in above style.

The opposite list represents Refrigerators or Storage Cabinets, same as cut shown above. The four 8, 12 and 20-quart sizes are made of Oak, and are carried in stock. All other sizes are made of Ash, but all are finished in Golden Oak.

These Cabinets are secured with heavy corner irons, which are inlaid under the base moulding. The Moulding is grooved out to fit over same.

These Cabinets are built very strong, and are lined with heavy galvanized iron, and are well insulated, and are great ice savers.

Only the best Porcelain Lined Cans are used, so that cream can be kept for any length of time without danger to taste from tin or rust.

Fig. 848.

All Cabinets having two jars or less come in above style.

The above cut shows the interior of our Cabinets, also our self-locking Hinges, which hold the top in an upright position while packing Cabinet.

INSTRUCTIONS FOR PACKING CABINETS.

Pack Cabinet every morning by drawing off three fourths of the water.

The ice should be broken fine and plenty of salt used. During the hot weather a little ice should be added in the evening. Care should be taken in packing to get salt near the bottom. If these directions are followed, cream can be kept in good condition during the hot weather, for an unlimited time.

CONSTRUCTION OF WALLS OF OUR ICE CREAM CABINETS.

The four sides and bottom of Cabinets are made up of three separate thicknesses of wood, one thickness of our special perfect non-conducting wood fiber, two thicknesses of heavy non-conducting felt paper, one thickness of water-proof paper, heavy galvanized lining, $\frac{3}{4}$ -inch air space. A is outside case, B is air space, C is water-proof paper, D is wooden wall $\frac{3}{8}$ -inch, E is non-conducting paper, F is wool fiber, G is non-conducting paper, H is wooden wall $\frac{3}{8}$ -inch, K is especially heavy galvanized lining. All interior wooden walls are thoroughly saturated with paint, so that moisture does not affect them.

Fig. 849.

This Cut shows raised lid of Cabinet.

Nos. 40, 50, 70, 80, 90 Single Cabinets, made to hold 8, 12, 20, 30 and 40 quarts.

AUTOMATIC COUNTER STOOLS.

No. 10.

Position when in use.

No. 10.

Position when not in use; folded under edge of counter.

Price per dozen, \$18.00.

These stools have become a necessity in every retail store. If you expect to do a successful business you must make your customers comfortable.

They are neat, durable and strong, and are capable of sustaining a weight of more than five hundred pounds. When not in use they fold up under the edge of the counter automatically. The standards are finished in fine bronze with tops of oak or ash, showing natural grain, or piano finish, being as attractive as they are useful. No first-class store can afford to be without them.

We make them in three sizes, as follows: 21, 24 and 26 in. The height given is when stool is in position for use.

ECONOMY CARBONATING OUTFIT.

Fig. 852.

Economy Outfit Parts.

1 No. 12 Gas Regulator.
1 Rocker.

1 Steel Fountain.
6 ft. Hose and Connections.

PRICES.

No. O Outfit, without Fountain.....	\$25.00
" OA " with Fountain	50.00

Gas and Gas Drums not included.

We especially recommend this outfit to confectioners and druggists who desire a complete and durable outfit at a moderate price. It is complete in every particular as shown in the illustration, the Gas Regulator being attached to the drum valve.

Gas Drums are Loaned, Not Sold.

Our Rocker will accommodate Fountains of different size with or without trunions and is so constructed that the Fountain will not be thrown from it during agitation.

The stop at the end of each forward and backward motion is very sudden, which very violently agitates and breaks up the water.

Price each, \$4.50.

Fig. 853.

CARBONATING OUTFITS.

How to Use.

1st. Remove cock in Steel Fountain, put in 10 gallons of *cool pure* water and replace cock, which must be screwed up tight.

2d. Screw out regulating screw on Gas Regulator until all tension is removed from spring and hand on gage dial shows zero.

3d. Connect Gas Regulator with Gas Drum and Charging Fountain by the proper hose.

4th. Each coupling should have a washer and all joints must be tight.

5th. Close outlet valve of Gas Regulator, turn on Gas from Drum and turn Regulating Screw down very slowly until the gage shows 150 pounds pressure.

6th. Open the outlet valve and allow the Gas to pass into the charging fountain.

7th. Agitate the water violently by rocking for 10 minutes with the gas pressure on.

8th. After water is charged, disconnect Fountain from Regulator and connect with tin pipe running to Draught Cock.

The water placed in Fountain must be cool, as warm water will not absorb Gas.

NEW PROCESS.

Liquid Carbonic Gas.

New Process Liquid Carbonic Gas is put up in steel drums or cylinders containing 20 and 50 pounds of liquid gas respectively. These drums are frequently tested at a pressure of 3,700 pounds to the square inch and as a further precaution against accident are provided with a safety valve which makes them absolutely safe to handle.

Price, Gas only, per pound.....	\$ 0.12½
“ Drums holding 20 lbs.....	10.00
Weight filled 100 lbs.	
“ Drums holding 50 lbs.....	17.50
Weight filled 130 lbs.	

F. O. B. Cleveland, Chicago, St. Paul or New York.

Gas Drums are loaned with the understanding that they are to be promptly returned when empty, freight prepaid, in as good condition as when they were received.

If not returned within 90 days we reserve the right to make sight draft for their value as above or to charge rent for them.

When all connections are tight and Gas is used according to our directions, one pound of Liquid Carbonic Gas will charge about 10 gallons of water at 150 pounds pressure, or will put up about 20 dozen half pints of Ginger Ale, etc.

Guaranteed Pure, Sweet and Odorless.

IMPROVED STEEL SODA FOUNTAINS.

Seamless.

Fig. 864.

10 Gallon Charging Capacity, 14 in. Dia., 32 in. high, price each\$25 00

Our Seamless Fountains are made from the best quality of steel, are practically seamless and have no rivets.

They are lined with the heaviest Block Tin in such a manner that they will wear longer than any other make.

Note the extra width of band around center.

Our Riveted Fountains are made from the best steel and are warranted to be equal in quality to any riveted fountain on the market.

The Block Tin lining is very heavy and is reinforced in such a manner as to give it an extra long life.

We reline Steel and Copper Founts at reasonable prices.

NO. 11, GAS REGULATOR.

Fig. 854.

This Regulator may be set for any pressure, from 10 to 300 pounds, maintaining it automatically, no matter how much greater the pressure from the drum may be.

It is furnished complete with copper connections, and is provided with a safety valve as a precaution against accident.

In using Liquid Carbonic Acid Gas it is highly important that a reliable Pressure Regulator be used to prevent accidents, which might occur at any time without it, from putting too high a pressure in the charging fountain.

It is also indispensable for the purpose of charging water uniformly, and the gas saved will pay for its cost in a short time.

PRICE EACH, \$22.00.

NO. 12, GAS REGULATOR.

Fig. 855.

This Regulator is designed to connect direct to the Drum without copper connections, and is provided with a safety valve as a precaution against accident.

It may be set for any pressure from 10 to 300 pounds, which it will maintain automatically and is especially convenient where a small amount of gas is used.

Full directions for the use of our Gas Regulators are attached to each one, and if followed carefully they will be sure to give perfect satisfaction.

PRICE, \$18.00.

HIGH PRESSURE GAGES.

FAULTLESS SODA DRAUGHT ARM.

Silver Plated.

Fig. 858. Patented.

PRICE EACH, \$28.00.

Mineral Water is drawn from this arm by gravity, which greatly improves its quality, as the water when so drawn retains a larger percentage of gas than when drawn from an ordinary arm. A quarter turn of the handle fills the glass cup with water, a quarter turn back removes the pressure from the water and pressing the handle down discharges the contents of the cup.

No. 80 Outfit, complete as above. **See Change Sheet.** Price, \$45.00

This Outfit is for Confectioners' use in dispensing Soda Water, for which purpose it will be found very convenient and economical. The syrup cabinet is more fully shown on page 284, and is now in more general use than any other box.

The coil compartment can easily be iced through the upper hinged lid and has space for storing ice cream, while the base has compartments for ten syrup jars.

NO. 55. SODA COIL BOX.

This Box has a hard-wood front and is lined with heavy sheet zinc. It can be fastened under the counter at any convenient place, and the cooling coil can easily be iced by letting down the hinged lid.

8 in. high, 16 in. wide, 14 in. deep.

Price, box only, \$8.00.

NO. 30, NOVELTY SODA BOX.

41 in. high, 22 in. wide, 24 in. deep.

PRICE.

Box only,	-	-	-	-	-	-	-	-	\$24.00
-----------	---	---	---	---	---	---	---	---	---------

This Box is intended to fit under a counter or it can be placed against the wall. It is made of hardwood, highly finished, is lined with galvanized iron and has an air space to prevent sweating and save ice.

It holds a steel fountain in the base which can easily be connected to the coil after being placed in the box, and has a large compartment for the coil and ice.

NO. 50, SYRUP CABINET.

28 in. high, 28 in. wide, 24 in. deep.

PRICE.

Box only,	-	-	-	-	-	-	-	\$16.00
-----------	---	---	---	---	---	---	---	---------

This Cabinet will be found very convenient and economical for dispensers' and confectioners' use.

It fits under any store counter or can be placed against the wall.

It is made of hardwood, nicely finished, is lined with heavy zinc and has an air space to prevent sweating and save ice.

The coil compartment can easily be iced through the upper hinged lid and has space for storing ice cream, while the base has compartments for ten syrup jars.

NO. 51, SODA AND SYRUP CABINET.

This elegant Cabinet will be an ornament to any establishment. It is made of quartered oak, lined with galvanized iron and copper and faced with german silver. The base has space for two steel fountains, which can easily be attached to the cooling coils after being placed in the box.

The top has a large space for coils and cooling chambers which can easily be iced by means of the hinged lid, and ice cream can also be stored there if necessary. Compartments are also provided for syrup jars in the middle where they can most easily be handled and cooled.

58 in. high, 36 in. wide, 24 in. deep.

Price, Cabinet only, \$75.00.

Imported Hot Soda Mugs, \$3.00 per Doz.

DESCRIPTION OF OUR COMBINATION SODA FOUNTAINS.

The cuts on page 287 show our No. 110 Combination Fountain and Refrigerator closed and open. The closed one is ready for use with our Double Spray Stirrup Lever Draft Arm, and our patent front arrangement for filling the syrup cans and icing the fountain and refrigerator from the front. Fig. 2 shows the front open and all is ready to fill the syrup cans and put in ice for the day. The cans are easily inspected and filled. The chamber is large and roomy so 150 lbs. of ice can be put in in one piece without having to break or chip it into small pieces, as is the case with many other makes. The larger the piece of ice that is used the longer it will last in the fountain, and by putting the ice in from the front instead of through the top, the danger of dropping the ice on the marble or into the fountain by the careless iceman and damaging the cooling apparatus and fountain, is reduced to a minimum. After putting in the ice and filling the syrup cans, the front swings back to its place and all is ready for use.

The syrup plates are reversible and hung on silver-plated hooks; a different syrup name is on each side of the plate; it is easy to detach from the hook and reversing shows a new syrup name; the ten syrup plates thus give the dispenser the choice of twenty different varieties of syrup flavor. The syrup cans for our 1903 designs are all made from solid sheet block tin—they are unbreakable, non-corrosive, and not affected by acids. Everything considered, there is no other material known as good for syrup cans as pure block tin.

Our syrup cocks are metal body, spring tension, silver plated on nickel, block tin lined, non-corrosive, not affected by acids, easy to operate, and work perfectly. To make the refrigerator of the greatest value to the dispenser of cold drinks it is necessary that it should be so constructed that the heat is kept out and the cold air is kept near the temperature of the ice. To this end, all walls—the bottom, ends, back, front doors, and under the marble—are made double, and the $\frac{7}{8}$ -inch space between the two walls is packed with mineral wool, which is the best non-conductor of heat known to the refrigerator world today. Inside of the inner wall is a heavy galvanized steel lining extending throughout the refrigerator and fountain. The arrangement for the circulation of cold air from the fountain ice chamber to the refrigerator below has been carefully looked after. The refrigerator is large and has plenty of room to hold all the syrups, crushed fruits, etc.

The ice water as it melts from the ice, is held to submerge the cooling apparatus, so that no matter how warm the day or how fast the soda water is drawn, it is always cold.

On top of the fountain proper is a solid quarter-sawed oak canopy of beautiful design, containing a large beveled-edge French plate mirror, and it has a rubbed and polished, or piano finish; also the refrigerator parts of the Combination are finished in the latest English oak color to match the Canopy and other woodwork. From the bottom of the shelf in front to the top of the fountain the front and ends are of selected marble, and a solid piece of marble covers the entire top of the fountain, upon which stands the canopy.

Regular fountain, when complete, includes canopy, refrigerator base, marble body, imitation onyx .
